

The Latest Construction Innovations and Industry Insights - February 20, 2025

Peer-to-peer digital content sharing for construction and building professionals

SUNDRE, ALBERTA, CANADA, February 20, 2025 /EINPresswire.com/ -- Since its establishment in 2003, Construction Links Network has emerged as a premier news and information hub in the construction sector. With a commitment to enhancing the digital presence and search engine visibility of its members, Construction Links Network has become an indispensable resource for a wide array of professionals. This includes construction managers, contractors, developers, building and property managers, architects, designers, engineers, and government officials.

As a dynamic hub for digital content dissemination, Construction Links Network offers its members diverse engagement opportunities through news releases, company announcements, blogs, podcasts, webinars, case studies, whitepapers, and videos.

This week's featured video, courtesy of Alberta Construction Safety Association (ACSA), highlights excavation hazards and the importance of safe practices. Excavations, which involve digging to remove material, can pose significant risks, particularly in trenches - excavations deeper than they are wide and no wider than 4.5 meters. Recognizing these hazards and knowing how to prepare and work safely is crucial for preventing serious injury or even death. ACSA offers valuable resources on excavation safety, alongside the Canadian Centre for Occupational Health & Safety.
