\$1.55 billion in 2025, the market's robust growth will be driven by a significant compound annual growth rate CAGR of 7.9%. The notable expansion during the historical period is largely attributable to the advancement of endoscopic techniques, favorable reimbursement policies, higher surgical success rates, regulatory approvals, and an increased awareness of GI treatments. This impressive growth trajectory is set to continue, with the market size projected to reach \$2.08 billion in 2029, boasting a compound annual growth rate CAGR of 7.6%.

What are the Key Drivers Propelling the Growth of the Enteral Stents Market?

Two pivotal aspects are significantly contributing to the growth of the enteral stents market. One is the increasing prevalence of gastrointestinal disorders due to poor dietary habits, rising stress levels, sedentary lifestyles, increased use of antibiotics, and growing exposure to environmental toxins. Enteral stents offer a minimally invasive solution to manage gastrointestinal disorders by relieving obstructions, restoring the natural flow of food and fluids, and improving overall

digestive functions. For instance, estimates from the Canada-based nonprofit organization, Crohn's and Colitis Canada, in June 2023, suggest that about 322,600 Canadians, or 0.8% of the population, were living with IBD. The projections indicate this figure could rise to 470,000 or 1.1% of the Canadian population by 2035.

The other key aspect driving [enteral stents market growth](#) is the escalating prevalence of cancer, characterized by the uncontrolled growth and dissemination of abnormal cells in the body. Factors such as aging, lifestyle choices, better diagnostic methods, genetic predisposition, and improved healthcare access, and awareness are responsible for this rise. Enteral stents are seminal in managing gastrointestinal obstructions resulting from cancer, thus improving symptoms like dysphagia and maintaining nutrient intake. To illustrate, the World Health Organization reported in February 2024 that by 2050, over 35 million new cancer cases are anticipated, marking a 77% increase from the estimated 20 million cases in 2022.
