

Trading Game Launches Cutting-Edge Chart Intelligence Feature, Bringing AI Analysis to Traders' Fingertips

NEW YORK, NY, UNITED STATES, March 4, 2025 /EINPresswire.com/ -- [Trading Game](#), the innovative trading education app with over 3 million users, has officially launched Chart Intelligence AI, a groundbreaking feature designed to revolutionize the way users analyze markets and make trading decisions.

The goal of Chart Intelligence AI is to democratize high-level technical analysis"

Janis Drbisevskis

This latest enhancement solidifies Trading Game's position as a leader in interactive financial education, blending technology and trading expertise into one comprehensive mobile platform.

Chart Intelligence AI: Smarter Analysis in Seconds

The Chart Intelligence AI feature brings professional-grade technical analysis to beginners and seasoned traders alike, making complex market interpretation accessible and lightning fast. Leveraging advanced artificial intelligence, Chart Intelligence AI scans market charts to:

- Identify support and resistance levels
- Analyze volume trends for accumulation and distribution
- Detect chart patterns such as head & shoulders, triangles, and flags
- Highlight potential breakout zones
- Evaluate price action across multiple timeframes, including 1-hour and 4-hour charts

This analysis—which could take human traders 10 to 15 minutes to complete—is delivered by the app in just 1 to 3 seconds, providing real-time insights directly within the trading simulator.

"The goal of Chart Intelligence AI is to democratize high-level technical analysis," explained Janis Drbisevskis, Co-Founder of Trading Game. "New traders often struggle to interpret charts effectively, which leads to poor decision-making and unnecessary losses. With this feature, even beginners can get professional-grade insights instantly, helping them learn to read the markets with confidence."

Bridging Education and Real-World Application

Since its founding in 2016 by Janis Drobisevskis and Axel Ore, Trading Game has been dedicated to helping users learn trading responsibly through a combination of interactive lessons, real-time market data, and gamified trading challenges. The Chart Intelligence AI feature enhances this educational mission by providing instant, actionable feedback within the app's highly popular trading simulator.

- With support for stocks, forex, commodities, and cryptocurrencies, users can now:
- Practice trades with AI-assisted insights
- Develop pattern recognition skills in real-time
- Learn how to spot high-probability setups using professional techniques
- A Balanced Approach: Innovation with Transparency

While Trading Game embraces cutting-edge technology, the app's core mission remains rooted in transparency and responsible learning. "This isn't about pushing signals or quick wins," added Drobisevskis. "It's about giving users the tools to understand why and how trades are made, building confidence in their decision-making process."

Balancing the Fun Factor

As part of its ongoing evolution, Trading Game continues to blend education with entertainment. The app's popular Trading Battles feature—where users compete in fast-paced trading duels—remains a top draw. However, the introduction of Chart Intelligence AI adds a layer of serious learning potential, transforming quick-fire gameplay into a valuable educational experience.

Part of a Bigger Vision

The launch of Chart Intelligence AI comes as Trading Game expands its premium offerings and global footprint. With strong growth in the U.S., U.K., Germany, Italy, Brazil, and beyond, Trading Game continues to enhance its platform with:

- Expanded trading courses for beginners and advanced traders
- New content focused on cryptocurrency, taxes, and long-term investing
- More AI features aimed at simplifying market analysis

About Trading Game

Trading Game is the world's leading market education app, with over 3 million students learning

the fundamentals of day trading, investing, and personal finance through interactive lessons and realistic market simulations. Available for iOS and Android, Trading Game blends fun and education into one seamless platform, helping users build trading confidence and market skills without risking real money.
