

Atlantic Medical Group - AMG Weight Loss Center Introduces Innovative Spatz Balloon Procedure

Atlantic Medical Group- AMG Weight Loss Center now offers the Spatz3 Intra gastric Balloon, an FDA-approved, adjustable, non-surgical weight loss solution in NC.

CHARLOTTE, NC, UNITED STATES, March 3, 2025 /EINPresswire.com/ -- [Atlantic Medical Group - AMG Weight Loss Center](#) is excited to announce the launch of the [Spatz3](#) Intra gastric Balloon at their three locations in North Carolina. The Spatz3 Intra gastric Balloon is an innovative, FDA-approved adjustable balloon designed to help patients manage their health more effectively. This advanced, non-surgical procedure offers a new approach to feeling fuller, eating less, and promoting overall wellness.

Dr. Eric Ibegbu

“Introducing the Spatz procedure is an exciting milestone for our practice. I’m thrilled to offer this innovative treatment because it represents a major advancement in personalized weight loss therapy,” said [Dr. Eric Ibegbu](#), President and Medical Director of Atlantic Medical Group - AMG Weight Loss Center. “The Spatz system is not only minimally invasive but also uniquely adjustable, allowing us to tailor treatment to each patient’s needs. This flexibility ensures we can maximize safety and effectiveness, ultimately empowering our patients to achieve lasting, transformative results. I believe incorporating the Spatz procedure will significantly enhance our ability to provide cutting-edge, patient-centered care,” added Dr. Ibegbu.

What is the Spatz3 Intra gastric Balloon?

The Spatz3 intra gastric balloon is a revolutionary device placed into the stomach via endoscopy, with moderate sedation, in a procedure that typically takes 10-20 minutes. This non-surgical outpatient procedure involves filling the balloon with liquid, which then expands to occupy space

in the stomach, leading to a feeling of fullness and reduced appetite.

Unlike other gastric balloons, the Spatz3 balloon is the first adjustable intragastric balloon available in the United States. Its unique feature allows for volume adjustments—either increasing or decreasing the fluid—based on the patient's progress and comfort, which can further enhance its effectiveness and reduce potential side effects.

Patient Care and Follow-Up

The balloon remains in the stomach for up to 8 months, during which time patients receive comprehensive follow-up care from our expert specialists and nutrition team. This approach ensures that patients make necessary dietary

and behavioral changes to maintain their health benefits even after the balloon is removed, leading to successful and sustainable results.

The image shows the Spatz3 IntraGastric Balloon, which is a light blue, spherical balloon with a clear window. It is connected to a white tube that has a handle and a connector. Above the balloon is the Spatz3 logo, which consists of a stylized 'S' inside a circle, followed by the word 'SPATZ' in a blue, sans-serif font.

Spatz3 IntraGastric Balloon

Who is a Good Candidate for Spatz3 IntraGastric Balloon?

Introducing the Spatz procedure is an exciting milestone for our practice... incorporating the Spatz procedure will significantly enhance our ability to provide cutting-edge, patient-centered care."

Dr. Eric Ibegbu

The Spatz3 IntraGastric Balloon procedure is ideal for individuals with a BMI of 30 to 40 who have not succeeded with traditional methods and are motivated to adopt a healthier lifestyle. It is also suitable for those not interested in invasive surgeries and who are in good overall health.

The comprehensive Spatz3 IntraGastric Balloon program includes:

- Pre-procedure consultation with an expert bariatric endoscopist
- 12-month nutrition and lifestyle coaching
- Comprehensive 1-year follow-up

- Cost of the balloon, insertion, and removal fees
- Post-procedure IV hydration
- A scale for tracking progress
