ANY.RUN Helps Transport Company Strengthen Cybersecurity with Proactive Threat Monitoring

DUBAI, DUBAI, UNITED ARAB EMIRATES, March 5, 2025

/EINPresswire.com/ -- Cyber threats continue to pose significant risks to the transportation industry, impacting operational stability and supply chain security. A leading transport company has successfully implemented [ANY.RUN's](#) advanced threat intelligence platform, enhancing its cybersecurity posture and proactively detecting potential risks.

Operating across North America, Latin America, and Europe, the transport company relies heavily on email communications, making it a prime target for phishing and malware. The company's CISO recognized the need to move beyond reactive security measures and address the challenge of attackers constantly shifting infrastructure. This involved finding a way to efficiently identify and track relevant threats amidst a vast and ever-changing threat landscape.

To overcome these challenges, the company implemented ANY.RUN's TI Lookup, a searchable database of indicators extracted from daily malware and phishing samples. By subscribing to custom search queries, the threat hunting team receives automated updates on relevant IOCs, IOAs, and IOBs.

□ □□□-□□□□□□□□ □□□□□□□□: Monitoring threats specifically targeting the company's international offices. For example, the company tracks email-distributed infostealers in Colombia using specific search parameters.

□ □□□-□□□□□□□□ □□□□□□□□: Proactively tracking both new and existing CVEs to identify potential exploits.

□ □□□□□□□□□□-□□□□□ □□□□□□□□: Monitoring for phishing campaigns, particularly those targeting Microsoft 365 credentials, using domain name-based queries.

The automated updates allow the team to prioritize threats effectively and translate intelligence into actionable signatures and detection rules, improving the company's security posture.
