What Drives the Growth of the Engerix-B Market?

A primary driver of the Engerix-B market is the rising prevalence of hepatitis B virus (HBV) infection. This serious liver disease can lead to chronic illness, liver damage, and an increased risk of liver cancer. The spread of HBV is influenced by factors such as unprotected sexual contact, blood-to-blood transmission, lack of vaccination, and immune system vulnerabilities. Engerix-B is formulated with an inactive HBV surface antigen, providing long-term immunity and significantly reducing the risk of infection and associated complications.
