What is Driving the Growth of the Iplex Market?

The increasing prevalence of Growth Hormone Deficiency (GHD) is a primary driver of the Iplex market. GHD occurs when the pituitary gland fails to produce adequate growth hormone, leading to developmental challenges in both children and adults.

Several factors contribute to the rise of GHD, including advancements in diagnostic techniques, improved awareness of endocrine disorders, and a higher incidence of genetic mutations, tumors, and traumatic brain injuries that impact growth hormone production.

For instance, in May 2022, the National Institutes of Health (NIH), a U.S.-based government agency, estimated that Growth Hormone Deficiency affects approximately 2 to 3 individuals per 10,000. As the prevalence continues to rise, Iplex (mecasermin rinfabate), which delivers insulin-like growth factor-1 (IGF-1) along with IGF-binding protein-3 to enhance growth and metabolic activity, has become a vital treatment option. This ongoing increase in GHD cases is expected to propel the Iplex market forward.
