

# Surgical Sponges Unveiled: Trends and Insights in the Laparotomy Sponge Market | CAGR of 7.3%

*Laparotomy is a medical procedure of abdominal surgery where a large incision is made to examine various abdominal organs such as stomach, intestine, and liver.*

PORTLAND, OR, UNITED STATES, March 7, 2025 /EINPresswire.com/ -- The [Laparotomy Sponges Market](#) is witnessing significant growth, driven by the rising demand for surgical procedures and the increasing emphasis on patient safety and infection control. These highly absorbent and sterile sponges are indispensable tools in abdominal surgeries, aiding in the absorption of fluids and blood, as well as providing a clear surgical field. Frequently Asked Questions (FAQs) surrounding the Laparotomy Sponges Market often revolve around their composition, sterilization methods, and regulatory compliance. With innovations in material technology and manufacturing processes, Laparotomy Sponges continue to evolve, catering to the evolving needs of surgeons and healthcare facilities, while ensuring optimal patient outcomes and operating room efficiency.

000000-00 000000 00000000 (000 & 0000) -

- **Disruption of the supply chain:** The COVID-19 pandemic has disrupted global supply chains, which can impact the availability of laparotomy sponges. Manufacturers may face challenges in sourcing raw materials or producing and distributing the sponges due to shipping delays, factory closures, or other logistical issues.
- **Increased demand for medical supplies:** The pandemic has increased demand for medical supplies, including laparotomy sponges, as hospitals and healthcare facilities treat a growing number of COVID-19 patients. This increased demand may lead to shortages or delays in obtaining the sponges.
- **Infection control protocols:** In response to the pandemic, healthcare facilities have implemented strict infection control protocols to prevent the spread of the virus. This may include changes in the use and disposal of laparotomy sponges, such as increased use of disposable sponges, more frequent changes of sponges during surgery, or changes in how the

sponges are sterilized.

- Financial impacts: The pandemic has had financial impacts on healthcare systems and individual patients, which may affect the use of laparotomy sponges. For example, hospitals may need to prioritize spending on COVID-19-related supplies and treatments, while patients may delay or forego elective surgeries that would require the use of laparotomy sponges.

Overall, the COVID-19 pandemic has the potential to impact the production, supply, and use of laparotomy sponges, which may have implications for patient care and surgical outcomes. Healthcare providers and manufacturers will need to navigate these challenges to ensure that patients receive the care they need.

Reported by Market Research (Global Market Research) -

- AdvaCare Pharma,
- B. Braun Melsungen AG,
- Cardinal Health.,
- Dynarex Corporation,
- DeRoyal Industries, Inc.,
- Medline Industries, Inc.,
- BSN Medical GmbH,
- DUKAL Corporation,
- Stryker Corporation,
- Integra LifeSciences Holdings Corporation (Derma Sciences Inc.)

Increase in abdomen disorders, rise in geriatric population, and prevalence of laparotomy surgeries drive the growth of the market. However, rise in demand for minimally invasive surgeries and issue of side effects due to retained laparotomy sponges would restrain the growth of the industry. Conversely, launch of technologically advanced products and untapped potential in emerging geographies would create new opportunities in the near future.

Reported by Market Research (Global Market Research) -

- The traditional laparotomy sponges segment accounted for more than one-fourth share of the global laparotomy sponges' market in 2017.
- The sterile laparotomy sponges' segment is expected to grow at highest CAGR from 2018 to 2025.

- The non-sterile laparotomy sponges segment accounted for around one-fifth share of the global laparotomy sponges' market in 2017.
