Emergence of nanotechnology and growing market for multifunctional coatings

The medical coatings market has witnessed enormous growth in the last few years. The advancements in nanotechnology present newer opportunities for the market. Nanotechnology plays an important role in the formulation of coatings for implantable medical devices and complex medical structures. Modern nanosystems for the diagnosis, imaging, and treatment of many diseases, including cancer as well as cardiovascular, ophthalmic, and central nervous system-related ailments, have emerged as a result of the rising use of nanotechnology products in healthcare. Nanocoatings offer enhanced biocompatibility, biostability, coating adhesion, and uniform coverage over challenging shapes, strength, and durability. Medical devices may demand multiple functionalities, including hemocompatibility, controlled drug delivery, biocompatibility, lubricity, and hydrophilicity. There might also be cases where the same device needs to be in two distinct physiological environments. Differentiation in requirements necessitates the use of multifunctional coatings.
