There are several different classes of migraine drugs, each with their own mechanism of action and potential side effects.

1. **Triptans:** Triptans are a class of drugs that work by constricting blood vessels in the brain and reducing inflammation. They are typically used to treat acute migraine attacks and can be taken in pill, nasal spray, or injection form.
2. **Nonsteroidal anti-inflammatory drugs (NSAIDs):** NSAIDs are a class of pain-relieving drugs that can be effective in treating mild to moderate migraine headaches. Commonly used NSAIDs for migraine include ibuprofen and aspirin.
3. **Ergots:** Ergots are a class of drugs that work by constricting blood vessels and reducing inflammation. They are typically used to treat moderate to severe migraine headaches and are available in pill or injection form.
4. **Antidepressants:** Antidepressants are sometimes used to prevent migraines by regulating the levels of certain brain chemicals that can trigger migraines. Commonly used antidepressants for migraine prevention include tricyclic antidepressants and selective serotonin reuptake inhibitors (SSRIs).
