How Is the Rising Prevalence of Chronic Wounds Fueling Market Growth?

The increasing occurrence of chronic wounds is a primary factor propelling the Santyl market. Chronic wounds, which often take 4–6 weeks or longer to heal, are commonly associated with conditions such as diabetes, venous insufficiency, and prolonged pressure injuries.

•Key Factors Contributing to Chronic Wounds:

oGrowth in diabetes cases

oAging global population

oIncreased incidence of poor circulation and impaired healing

Santyl plays a crucial role in wound care by breaking down necrotic tissue without harming healthy tissue, thereby accelerating the healing process.

For instance, in July 2023, OSF HealthCare reported that 6.7 million people in the U.S. were living with chronic wounds, a number projected to increase by over 2% annually over the next decade.

This growing patient base is expected to further boost demand for Santyl.
