Data Catalog Market Showing Impressive Growth During Forecast Period 2023-2032

The Data Catalog Market is growing rapidly, driven by AI, data governance, and analytics needs, with strong adoption in enterprises worldwide.

WILMINGTON, DE, UNITED STATES, March 13, 2025 /EINPresswire.com/ -- Data catalog is a database instance which is designed to help organizations find and manage large amount of data, including tables, files, and databases stored in the company's ERP, e-commerce systems, and human resources. It centralizes metadata at one location to provide a full view of each piece of data across databases and contains information about the data's location, profile comments, statistics, and summaries.

Many organizations nowadays have a large volume of structured and unstructured data which requires easy access from different storage sources and is important to gain better insights for making business-related decisions. It has the capabilities which help users, such as analysts, data scientists, or developers to discover and consume data sources. Data catalog market size is set to increase as it provides a crowdsourcing arrangement of metadata and annotations that permits every user to contribute their knowledge.

Increase in the growth of self-analytics data, proliferation of data in the modern world, and growing demand for business intelligence tools are the major drivers of the market. In addition, real-time availability of data, which helps to reduce the cost of infrastructure and gain business insights, fuels the data catalog market growth. However, lack of standardization in data

management and data security & privacy concerns among different enterprises hampers the growth of the market. Furthermore, surge in the investment in the AI-enabled data catalog solutions and rise in automation technology are anticipated to create major opportunities in the data catalog market.
