

Heading Towards a \$33B BIM Market: Cambashi Forecasts Strong Growth in BIM Software

The global Building Information Modeling (BIM) software market is projected to reach \$33 billion by 2028

CAMBRIDGE, CAMBRIDGESHIRE, UNITED KINGDOM, March 13, 2025

/EINPresswire.com/ -- [The global Building Information Modeling \(BIM\) software market](#) is projected to reach \$33 billion by 2028, with a compound annual growth rate (CAGR) of approximately 10% over the next five years.

According to [Cambashi](#), a leading global software industry analyst firm, [BIM Construct and BIM Data Management](#) are the fastest-growing segments, exhibiting growth rates in the low to mid-teens. Several key factors are driving this expansion:

- The construction industry is leveraging software technology to enhance productivity and efficiency, which is increasingly critical in an environment where labor shortages and skill gaps persist.
- The need to maintain and manage data across the entire lifecycle of a built asset – influenced by building owners seeking long-term value, and regulatory requirements including region-specific BIM mandates.
- Sustainability initiatives that play a crucial role, as both public and private sectors emphasize energy efficiency, material optimization, and reduced environmental impact.
- The continued adoption of platforms, whole lifecycle coverage, and AI/ML (Artificial Intelligence & Machine Learning) technologies that drive innovation in the BIM software market.
