

HeartLung Technologies to launch AutoChamber™ AI at ACC 2025 and begin offering the AI services to healthcare providers

HeartLung Technologies to debut its FDA designated "Breakthrough" AI technology (AutoChamber™) at ACC 2025, offering lifesaving AI solutions for CVD prevention.

HOUSTON, TX, UNITED STATES, March 17, 2025 /EINPresswire.com/ -- HeartLung Technologies is thrilled to announce the official launch of AutoChamber™ at the 2025 American College of Cardiology (ACC) Annual Scientific Session & Expo in Chicago.

This groundbreaking AI solution will be showcased for the first time, marking a significant milestone in cardiovascular care.

AutoChamber™ is designed to work with both non-contrast and contrast-enhanced chest CT scans, providing estimates of cardiac volume, cardiac chambers volumes, and left ventricular wall mass. This AI-powered tool detects cardiomegaly and enlarged individual cardiac chambers, including the left atrium (LA) and left ventricle (LV), which are often missed in routine scans. By identifying these conditions early, AutoChamber™ AI helps prevent life threatening diseases like stroke, heart failure, and atrial fibrillation.

Before AutoChamber™
 Coronary Artery Calcium Scan, LDCT Lung Cancer Screening Scan, Lung Diagnostic Scan, Coronary CT Angiography Scan

After AutoChamber™
 Coronary Artery Calcium Scan, LDCT Lung Cancer Screening Scan, Lung Diagnostic Scan, Coronary CT Angiography Scan

What Are The Main Benefits of AutoChamber™

- Opportunistic Value Generator:** AutoChamber™ analyzes your imaging center to find life-threatening conditions in asymptomatic patients and generate revenue.
- No Capital Investment Needed:** Any diagnostic imaging center from anywhere in the world can sign up and start adding AutoChamber™ reports to any chest CT scans.
- Rapid AI Turnaround Within Minutes:** Receive rapid results within minutes of sending your scan to AutoChamber™ AI cloud. No training or learning curve is needed and no collaboration platform.

Case Example 1: 65-year-old female with 10-year ACHD. Developed HF in 10 years. LV Volume: 188.4 cc (20% hypertrophic). Coronal LV Volume: 18.8 x 24.6 cc.

Case Example 2: 65-year-old female with 10-year ACHD. Developed AF in 6 years. LV Volume: 188.4 cc (20% hypertrophic). Coronal LV Volume: 18.8 x 24.6 cc.

People that could have been saved by AutoChamber™
 These two case examples show patients who were deemed low risk for heart failure because of a Coronary Artery Calcium (CAC) score of 0. Both patients later developed fatal stroke, atrial fibrillation (AF), and heart failure (HF). AutoChamber™ was run on these patients' scans and found that both cases had enlarged cardiac chambers and were at high risk of heart failure, atrial fibrillation, and stroke. The call-on AutoChamber report could have been life-saving.

AutoChamber™ provides highly significant added value to CAC scans, CCTA, CTA, LDCT, and chest diagnostic CT scans.

Your Cardiac Chambers Volumetry Report

Patient Name: Name, None
 ID: None
 Date of Exam: 07/30/2023
 Date of Birth: 02/02/1960
 Gender: Male

AutoChamber™
 Chamber Volume Percentile

Chamber	Volume	Percentile
LA (Left Atrium)	76.5	38.4 82th
LV (Left Ventricle)	158.3	78.3 95th
RA (Right Atrium)	119.7	62.1 95th
RV (Right Ventricle)	193.6	97.2 91th
LW (Left Ventricular Wall)	145.5	73.8 90th

Cardiothoracic Ratio: 0.44
 *Adjusted by body surface area (BSA)

Detect Hidden Heart Disease

Catch What A Calcium Score Can't
 This graph shows a significant percentage of people who are classified as low risk based on coronary artery calcium (CAC) scores of zero or below 100 have or enlarged left atrium (LA) that puts them at a high risk of atrial fibrillation (AF) and stroke.

Enlarged Left Atrium (LA) by Calcium Score Categories

Calcium Score	Percentage of People with Enlarged LA
0	18%
100	28%
300	32%
1000	41%

Simple & Easy Workflow Integration

How It Works
 AutoChamber™ for Diagnostic Imaging Centers

CT Scan → DICOM → AutoChamber™ AI Engine → PDF Report → Physician's Report

Physician's Report → DICOM/PDF → PACS

Optional: Reporting Health Monitoring

"By adding AutoChamber™ AI to CT scans including coronary artery calcium (CAC) and CCTA

scans, doctors not only can evaluate coronary disease but also the risk of heart failure, atrial fibrillation and stroke which are not reported today. The opportunity is even greater in millions of lung CT scans.” said Dr. Morteza Naghavi, founder and president of HeartLung Technologies, and founder of nonprofit SHAPE (Society for Heart Attack Prevention and Eradication www.vp.org).

With AutoChamber™, anybody who orders a chest CT scan can request to add reports for the following components:

1. Heart failure
2. Atrial Fibrillation
3. Stroke

What Are The Main Benefits of AutoChamber™?

A. AutoChamber™ AI is an Opportunistic Value Generator both for Patients and for Hospitals or Diagnostic Imaging Centers.

AutoChamber™ AI enables your imaging center to find life-threatening conditions in asymptomatic patients that can save their lives from irreversible and fatal consequences, and along the way generate opportunistic additional revenue for the system, a win-win-win all around.

B. No Capital Investment Needed:

Any diagnostic imaging center from anywhere in the world can sign up and start adding AutoChamber™ AI reports to any chest CT scans.

C. Simple and Easy Workflow Integration:

Your practice can install the HeartLung gateway and receive AutoChamber™ AI reports directly in your PACS. Your patients can access the report from HeartLung’s web portal and mobile app.

HeartLung.AI

Case Example 1

Female
Age: 57
CAC Score: 0
10-Year ASCVD Risk: 1.4%
(Low Risk)

LA Volume (cc): 84.6
LV Volume (cc): 121.7
CTR: 0.5

This case developed HF and Afib

Case Example 2

Male
Age: 55
CAC Score: 0
10-year ASCVD Risk: 4.8%
(Low Risk)

LA-Volume (cc): 82.2
LV-Volume (cc): 132.5
CTR: 0.48

This case developed HF.

Case Example 3

Female
Age: 60
CAC: 0
10-year ASCVD Risk: 4.1%
(Low Risk)

LA Volume (cc): 76.2
LV Volume (cc): 117.1
CTR: 0.49

This case developed Afib and stroke.

Abbreviations & Definitions

ASCVD	Atherosclerotic cardiovascular disease	LV	Left Ventricle
CAC	Coronary Artery Calcium	LVW	Left Ventricular Wall
CTR	Cardiothoracic Ratio	RA	Right Atrium
LA	Left Atrium	RV	Right Ventricle

D. Rapid AI Turnaround Within Minutes:

Receive rapid results within minutes of sending your scan to AutoChamber™ AI cloud. No training or learning curve is needed and no calibration phantom.

Starting in April, 2025, HeartLung Technologies will begin offering AutoChamber™ AI services to hospitals, diagnostic facilities, radiology centers, clinics, and more.

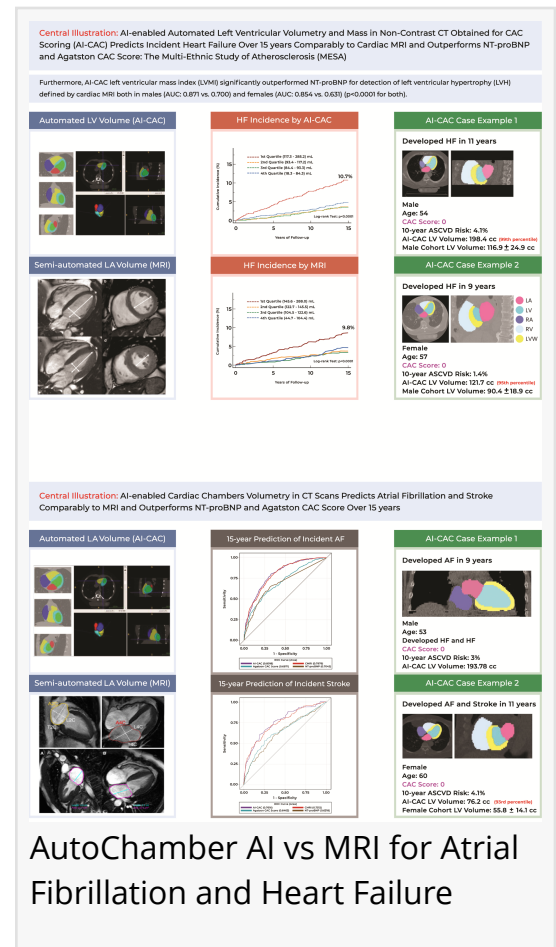

AutoChamber™ AI is the first FDA-approved AI with "Breakthrough" designation, empowering physicians to detect patients with enlarged cardiac chambers and left ventricular hypertrophy that are not visible to the human eye.

HeartLung has already partnered with [SimonMed Imaging](#) to offer AutoBMD™, an AI-powered bone density screening solution, to their facilities nationwide. This partnership exemplifies HeartLung's commitment to advancing preventive healthcare through innovative AI technologies.

"We are excited to officially launch AutoChamber™ AI at ACC 2025 and to begin offering this innovative solution to healthcare providers," said Dr. Morteza Naghavi, founder of HeartLung Technologies. "AutoChamber™ AI represents a major leap forward in cardiovascular care, and we are eager to demonstrate its life-saving capabilities."

About HeartLung Technologies:

HeartLung leverages AI technology for the early detection of heart disease, lung cancer, emphysema/COPD, osteoporosis, myosteator, fatty liver disease, and other life-threatening conditions. HeartLung has received FDA "Breakthrough Designation" for AutoChamber™, an AI tool that identifies enlarged cardiac chambers and left ventricular hypertrophy in non-contrast chest CT scans, which are typically undetectable by the human eye. The AutoChamber™ AI also works on low-dose CT for lung cancer screening as well as contrast-enhanced coronary CT angiography (CCTA) scans. Additionally, HeartLung has obtained FDA 510(k) clearance for AutoBMD™, the only DEXA-equivalent, CT-based opportunistic osteoporosis screening approved by the FDA, applicable to over 25 million CT scans annually and reimbursed by Medicare. HeartLung is also awaiting FDA approval for AI-CVD™, a suite of AI modules including AI-CAC™ (AI-enabled Coronary Artery Calcium Scoring), aimed at early detection and prevention of cardiovascular disease using widely available CT scans.
