

# A' Robotics, Automaton and Automation Design Award Announces Last Entry Period for 2025 Competition

*The prestigious A' Robotics, Automaton and Automation Design Award extends opportunities for robotics innovators to showcase excellence through last submissions*

COMO, CO, ITALY, March 17, 2025 /EINPresswire.com/ -- The A' [Robotics, Automaton and Automation Design Award](#), a highly regarded recognition platform established in 2008, has commenced its last entry period for the 2025 competition cycle. The award program, recognized for celebrating excellence in robotics innovation, aims to highlight outstanding achievements in automation technology, robotic systems, and mechanical design. This distinguished accolade serves as a benchmark for innovation in the robotics sector, attracting entries from pioneering designers, manufacturers, and research institutions worldwide.

Past laureates of the award exemplify the competition's commitment to advancing robotics technology. Notable winners include Denso Corporation for their Automatic Harvester Robot, which revolutionized agricultural automation, and Ufuk Ogul Dulgeroglu's Robuddy Autonomous Guide Dog, enhancing mobility assistance. These innovations, alongside achievements from Guangpeng Yue, Chien Yu-Chieh, Li Kai-Chu, and others, demonstrate how awarded designs contribute to societal advancement through improved efficiency, accessibility, and technological integration.

The competition encompasses diverse categories, including industrial robots, service robots, robotic arms, autonomous vehicles, and automation systems. Submissions remain open until March 30, 2025, welcoming entries created within the past decade. The comprehensive evaluation process examines innovation, efficiency, safety measures, adaptability, and sustainability considerations. Participants may submit entries through a two-stage process, beginning with a preliminary assessment followed by nomination.

Entries undergo rigorous evaluation through a blind peer-review process by an international jury panel comprising academics, robotics professionals, journalists, and industry experts. Assessment criteria focus on twenty distinct areas, including mechanism efficiency, safety protocols, control interface design, environmental adaptability, and future-proof implementation. This systematic approach ensures an objective evaluation of each submission's technical merit and practical application.

The A' Design Prize package offers comprehensive benefits for winners, including the prestigious winner logo license, exhibition opportunities, and extensive media coverage. Laureates receive international recognition through inclusion in the yearbook publication, participation in physical exhibitions, and targeted PR campaigns. Pro-Edition winners additionally receive the award trophy, printed certificates, and invitation to the gala-night ceremony at Lake Como, Italy.

Recognition of excellence in robotics design plays a vital role in advancing technological innovation and societal progress. The A' Robotics, Automaton and Automation Design Award aims to foster developments that enhance efficiency, safety, and accessibility across various sectors. Through celebrating outstanding achievements, the program encourages the creation of superior robotics solutions that address contemporary challenges and improve quality of life.

Robotics designers, automation engineers, manufacturers, and research institutions interested in participating may access detailed information and submission guidelines at:

#### About A' Robotics, Automaton and Automation Design Award

The A' Robotics, Automaton and Automation Design Award represents a significant platform for recognizing excellence in robotics innovation and design. The competition welcomes participation from designers, agencies, manufacturers, and enterprises worldwide, offering opportunities for international recognition and industry advancement. Through rigorous evaluation processes and comprehensive benefits, the award aims to promote innovations that enhance technological capabilities and societal well-being. The program emphasizes sustainable development, safety standards, and practical applications in robotics design, contributing to the evolution of automation technology.

#### About A' Design Award

The A' Design Award stands as an international juried design competition fostering innovation across multiple disciplines. Established in 2008, the competition operates through a meticulous blind peer-review process, evaluating entries based on predetermined criteria. The award program aims to advance society through recognition of superior design, promoting innovations that enhance global well-being. Operating with a philanthropic mission, the competition celebrates achievements that contribute to technological and social progress, while maintaining rigorous standards of evaluation and ethical practices. Interested parties may explore the competition, view past laureates, and participate at:
