

# Andros Advances Breakthrough Network Lifecycle Platform Category

*Andros advances the Network Lifecycle Platform, a groundbreaking solution to streamline provider network management.*

NEW YORK, NY, UNITED STATES, March 18, 2025 /EINPresswire.com/ -- Andros, the leader in network lifecycle technology and solutions, is setting the standard with the introduction of the Network Lifecycle Platform (NLP), a first-of-its-kind approach to provider network management. This innovative healthcare platform orchestrates the ecosystem of solutions and technologies to create higher-performing networks that support the entire provider network lifecycle.

“For too long, healthcare organizations have had to navigate fragmented systems that create inefficiencies and roadblocks throughout the provider network lifecycle,” said Jeff Fritz, CEO at Andros. “By introducing the concept of the Network Lifecycle Platform, our industry is able to transform the provider landscape by offering an intelligent, connected ecosystem that supports payers and providers alike—improving access to care and patient outcomes.”

The pace of change in healthcare is accelerating. Member needs are shifting, the provider ecosystem is growing more complex, and technology is transforming how healthcare organizations operate. To keep up, provider networks—and the businesses that build and manage them—must become more dynamic, data-driven, and adaptable. Traditional, static approaches to networks are no longer sufficient and success now depends on the ability to integrate real-time insights, streamline processes, and proactively respond to market shifts.

A Network Lifecycle Platform is not just a single solution, but a connected ecosystem that redefines how provider networks are managed. It’s about creating the technology and business architecture necessary to drive better outcomes by modernizing the connection of people, processes, and tools that already power network operations. By unifying these key elements,

healthcare organizations can move beyond fragmented workflows and take a more impactful, scalable approach.

“The Network Lifecycle Platform isn’t just an evolution, it’s a necessary shift in how healthcare organizations design, develop, and manage provider networks,” said Melissa Kittelson, Chief Network Transformation Officer at Andros. “By optimizing networks to achieve all aspects of the quadruple aim, it helps unlock the pent-up demand from both providers and patients.”

Andros is transforming how healthcare organizations build, manage, and optimize provider networks—with solutions like [Andros Arc](#) fitting seamlessly within the Network Lifecycle Platform framework. By leading this category, Andros continues to push the industry forward, ensuring healthcare networks are built for the future.

#### About Andros

Andros is transforming provider network management for healthcare organizations with a data-driven, integrated approach that delivers high-performing networks optimized for better care and efficiency. With a proven track record of building over 200 networks nationwide, Andros offers comprehensive solutions that support every stage of the network lifecycle, from strategy to execution. At the heart of our innovation is Andros Arc™, the leading Network Lifecycle Platform solution. By leveraging precision and actionable insights, Arc empowers health plans and providers to unlock the hidden potential of their networks, driving measurable outcomes and lasting impact.
