Prime determinants of growth

Increased investments into greenfield facilities, new factories, production site modernization, and shift to renewable power, clean fuels, and sustainable technologies necessitate significant capex, which boosts the growth of the global capital expenditure market. In addition, factors such as capex allocation for emerging technologies such as AI, IoT, blockchain, cloud platforms have positively impacted the growth of the market. However, surge in geopolitical tensions and trade conflicts, and supply chain disruptions impacting project timelines are expected to hamper the market growth. On the contrary, the surge in investment on large-scale infrastructure projects and 5G infrastructure rollouts by telecom providers are expected to offer remunerative opportunities for the expansion of the market during the forecast period. Each of these factors is projected to have a definite impact on the growth of the capital expenditure market.

Impact of Russia-Ukraine War

The Russia-Ukraine conflict has induced significant uncertainty into the global economic landscape leading to scaled back capital expenditure (capex) appetite amid rising inflation, weaker demand outlook and higher financing costs.

While economic pressures and geopolitical tensions persist, enterprises are reviewing non-

critical outlays more prudently. However, structural demand drives around sustainability, urbanization, and emerging tech promises a temporary setback rather than systemic Capex contraction.

The land segment is expected to maintain its leadership status throughout the forecast period.

For more information, please contact: <https://www.alliedmarketresearch.com/purchase-enquiry/A07601>

By asset type, the land segment held the highest market share in 2022, accounting for more than one-fourths of the global capital expenditure market revenue, as investments into industrial land acquisitions and factory buildings construction continues to rise driven by manufacturing expansions across developing regions. However, the software segment is projected to manifest the highest CAGR of 18.7% from 2023 to 2032, owing to software remains a focal area with particular emphasis on cloud capabilities enhancement, AI integration, and data analytics advancements.

The industry vertical segment maintains its leadership status throughout the forecast period.

By industry vertical, the oil and gas segment held the highest market share in 2022, accounting for more than one-fourths of the global capital expenditure market revenue. This is attributed to modernization of downstream facilities such as refineries and petrochemical plants to enhance efficiency, meet environmental standards, and shift towards higher value products. However, the healthcare segment is projected to manifest the highest CAGR of 20.9% from 2023 to 2032, owing to investment in advanced medical equipment and diagnostics on the back of progress in fields like genomics, robotics and AI.

North America maintains its dominance until 2032.

Based on region, North America held the highest market share in terms of revenue in 2022, accounting for more than one-fourths of the global capital expenditure market revenue, owing to advanced industrial maturity and earlier adoption curve for technological innovations necessitating infrastructure upgrades. However, the Asia-Pacific region is expected to witness the fastest CAGR of 16.4% from 2023 to 2032 and is likely to dominate the market during the forecast period, owing to factory automation investments by manufacturers and public infrastructure development programs.
