LONDON, GREATER LONDON, UNITED KINGDOM, March 24, 2025

[/EINPresswire.com/](https://www.einpresswire.com/) -- What factors are anticipated to drive the growth of the animal parasiticides market?

One of the significant drivers bolstering the animal parasiticides market is the escalating prevalence of zoonotic diseases. These are infectious diseases transmitted between animals and humans and can be caused by bacteria, viruses, parasites, or fungi. The increase in zoonotic

diseases can be attributed to a multitude of factors including climate change, antibiotic resistance, poor sanitation, and hygiene, all of which animal parasiticides assist in mitigating. For example, in April 2024, according to the European Centre for Disease Prevention and Control, a UK-based governmental organization, the number of confirmed brucellosis cases increased to 199 in 2022, from 165 cases in 2021.
