What Drives The [Biliary Tract Cancer Market Growth](#)?

One of the pivotal drivers propelling the growth of the biliary tract cancer market forward is the increasing prevalence of obesity, a chronic medical condition typified by an excessive accumulation of body fat detrimental to health. The upswing in obesity prevalence is attributed to factors spanning physical inactivity, psychological influences, aging, and genetic and biological factors. Obesity ignites chronic inflammation, insulin resistance, and excess bile acid secretion which foster DNA damage and tumor growth.

The escalating cases of obesity are further disrupting hormones and metabolism, nurturing an environment within the biliary tract that is prone to cancer. Highlighting this, in September 2023, the Centers for Disease Control and Prevention, a US-based government agency, reported that in 2022, the number of states with an adult obesity rate of 35% or higher had risen to 22, up from 19 in 2021. Consequently, the growing prevalence of obesity is a major catalyst fueling the growth of the biliary tract cancer market.
