What are the major factors driving the growth of the disseminated intravascular coagulation DIC market?

The increasing prevalence of cancer is anticipated to propel the growth of the Disseminated Intravascular Coagulation DIC market. Cancer, a disease characterized by the uncontrolled growth and spread of abnormal cells that can invade and destroy normal tissues, is on the rise due to various factors such as the aging population, lifestyle changes, environmental exposure, infections, and genetic predisposition. It can trigger excessive activation of the coagulation cascade through tumor-produced procoagulant substances, leading to widespread clotting and bleeding, thus causing DIC. This increase in global cancer cases signifies a promising outlook for the DIC market.
