

# HeadSpin Launches 'CloudTest PRO' – The Ultimate Platform for Advanced Functional Testing and Deep Performance Insights

RIVERSIDE, CA, UNITED STATES, April 3, 2025 /EINPresswire.com/ -- [HeadSpin](#), a leader in AI-driven testing, today announced the launch of [CloudTest Pro](#), an advanced real-device testing platform built to help enterprises deliver high-quality digital experiences with actionable functional testing and deep performance insights.

Delivering seamless user experiences requires businesses to optimize their

applications across various devices, networks, and real-world conditions. This requires functional testing, continuous monitoring, and performance insights to address potential issues proactively.

“

Performance is often overlooked before software release, but it significantly affects user experience. We're solving this by enabling devs to track all essential KPIs alongside their functional tests.”

*Eric Hatton, CEO at HeadSpin*

CloudTest Pro enables businesses to do this by providing a unified platform for comprehensive testing and monitoring. At its core, CloudTest Pro supports over 130+ standard and custom KPIs, enabling teams to measure and [optimize application performance](#) effectively.

Furthermore, each and every test is executed on real devices - iOS, Android, tablets, PoS systems, OTT devices, Smart TVs, and web browsers, with flexible deployment options including dedicated cloud, on-premise, and air-gapped environments. It seamlessly integrates with 60+ automation frameworks and offers manual and automated

testing capabilities enhanced by built-in tools like Appium Inspector and Mini Remote for gesture support.

CloudTest Pro's advanced functionality is further strengthened by three dedicated add-ons.

Experience+ provides insights on page load time, response time, and more. Performance+ tracks network and device KPIs such as throughput, download speed, CPU, and memory usage. Media+ enables audio and video quality analysis using industry-standard models like UVQ, VMAF, and VMOS (developed in-house).

The platform's intuitive waterfall UI, AI-powered issue cards, and Grafana dashboards empower teams to identify performance bottlenecks and make data-driven decisions quickly. Additionally, CloudTest PRO includes three weeks of expert support to help teams integrate KPIs, customize dashboards, and maximize their testing outcomes.

CloudTest PRO is purpose-built for enterprises seeking scalable, high-accuracy, real-device functional testing paired with deep performance intelligence.
