What role has the increasing incidence of bacterial infections played in the market's performance?

The increasing incidence of bacterial infections is expected to propel the growth of the metronidazole market going forward. Bacterial infections are diseases caused by the growth and multiplication of harmful bacteria in the body. The increasing incidence of bacterial infections is driven by factors such as antibiotic resistance, environmental changes, and the rise in immunocompromised populations. Metronidazole targets bacterial DNA, causing damage that halts reproduction and spread. This makes it effective against anaerobic bacteria and certain protozoal infections, inhibiting bacterial growth and treating the infection.
