LONDON, GREATER LONDON, UNITED KINGDOM, March 27, 2025

[/EINPresswire.com/](https://www.thebusinessresearchcompany.com/) -- The global

market for oral mucositis has shown exemplar growth in the past and is

expected to continue to grow even stronger in the coming years. The market size grew robustly from \$1.51 billion in 2024 to \$1.63 billion in 2025, recording a compound annual growth rate CAGR of 8.0%. This growth has been attributed to a rise in cancer cases, the increased awareness of oral mucositis, the growth in chemotherapy and radiation treatments, higher incidence of head and neck cancers, and the increasing adoption of supportive care therapies.

What drives this steep [growth in the Oral Mucositis Market?](#)

One of the key drivers of growth in the oral mucositis market is the increasing prevalence of cancer. As the number of cancer cases rises, owing to factors such as the aging population, lifestyle changes, and environmental exposure, the demand for oral mucositis therapies also exponentially increases. These therapies aid cancer patients by alleviating pain, reducing inflammation, preventing secondary infections, and promoting faster healing of oral tissues. As per the National Cancer Institute, in 2022, an estimated 20 million new cancer cases and 9.7 million cancer-related deaths were recorded worldwide. These numbers suggest an increase to 29.9 million new cases and 15.3 million deaths annually by 2040, thereby driving the growth of the oral mucositis market.

What new trends and technologies are seen in the Oral Mucositis Market?

Companies active in the oral mucositis market have been focusing on developing innovative solutions like cryotherapy, which utilizes cold therapy to minimize damage to oral tissues and reduce the severity and incidence of the condition. Cryotherapy is used to treat various conditions like warts, tumors, or injuries by freezing and destroying abnormal or diseased tissues. A prime example is the Chemo Mouthpiece by Chemo Mouthpiece LLC, which was approved by the FDA in February 2024. The Chemo Mouthpiece delivers cryotherapy to the oral cavity of a patient undergoing chemotherapy, actively managing and treating oral mucositis, a common side effect of chemotherapy.

How is the [Oral Mucositis Market Segmented?](#)
