

HPDC Launches PFAS Attestation Feature to Support Safer Material Choices

WAKEFIELD, MA, UNITED STATES, April 10, 2025 /EINPresswire.com/ -- The Health Product Declaration® Collaborative (HPDC) has introduced a new PFAS Attestation feature, designed to enhance transparency and support industry efforts to reduce the use of per- and polyfluoroalkyl substances (PFAS) in building products.

This feature gives manufacturers clear guidance on how to disclose the presence—or intentional absence—of PFAS in their products, using a standardized attestation format. It supplements the standard ingredient reporting formats available in Health Product Declaration reports, to provide greater precision in the reporting of PFAS ingredients. This is an example of the responsive and continual improvement that the HPDC Technical Committee supports to enhance transparency and health in material selection for both manufacturers and project design teams.

To support implementation, HPDC has also released new PFAS Best Practice Guidance documents. These resources help manufacturers and project teams better understand PFAS-related disclosure and integrate safer material choices into their practices.

An overview video is available here:

“The PFAS Attestation feature is a powerful tool for manufacturers to provide greater transparency about their product ingredients,” said Wendy Vittori, Executive Director of HPDC. “It empowers product manufacturers and design teams to respond proactively to growing interest

Healthy building

in how and where PFAS ingredients are in use.”
