What Does the Vertigo Treatment Market Look Like Recently and Going Forward?

The [vertigo treatment market size](#) has grown robustly in recent years, escalating from \$1.58 billion in 2024 to \$1.68 billion in 2025. This accounts for a compound annual growth rate CAGR of 6.1%. The significant progress in the historic period is driven by various factors, such as an increasing geriatric population, escalating healthcare expenditure, rising investments in research and development, a surge in vertigo cases, and heightened awareness about ear problems.

What Are the Future Projections for the Vertigo Treatment Market?

Anticipated to demonstrate robust growth in the coming years, the vertigo treatment market size will escalate to \$2.10 billion in 2029 at a compound annual growth rate CAGR of 5.7%. The growth in the forecast period can be credited to numerous elements like the rising number of clinical trials, the emergence of novel drugs, increased government initiatives, growing availability of drugs, and increasing occurrence of brain stem problems. One can also discern several major trends in the forecast period, such as novel vertigo-related therapeutics, telehealth services, device-based therapies, technological advancements, and strategic collaboration.

What Is Driving the Growth of the Vertigo Treatment Market?

The escalating prevalence of sports-related injuries is propelling the growth of the vertigo treatment market. Such injuries primarily refer to physical harms that occur during sports

participation or recreational physical activities. The prevalence of sports-related injuries is surging due to enhanced high-impact sports participation, intense training regimes, and the dearth of proper injury prevention measures.

To alleviate symptoms such as dizziness and to improve balance and restore vestibular function, vertigo treatments offer a combination of medications, vestibular rehabilitation therapy, and lifestyle modifications. As a result, sports-related injury patients can recover quicker, regain coordination, and safely return to their sports activities. For instance, according to the National Highway Traffic Safety Administration, a US-based government agency, pedal cyclists fatalities witnessed a 13 percent increase in 2022, with 1,105 fatalities in comparison to 976 in 2021. Also, about 46,195 pedal cyclists were injured in 2022, an 11 percent increase from 41,615 injuries reported in 2021. Therefore, the increasing prevalence of sports-related injuries is driving the growth of the vertigo treatment market.
