

DTG PRO Unveils Its Revolutionary MagicSeal™

DTG PRO Unveils Its Revolutionary MagicSeal™ for Enhanced Breathability and Better Hand Feel of Printed Garments (works with DTF, DTG, and other technologies)

LOS ANGELES, CA, UNITED STATES, April 4, 2025 /EINPresswire.com/ -- DTG PRO, a leader in innovative printing solutions, proudly announces the availability of [MagicSeal™](#) in both Sheet and Spray options, providing users with flexible options to enhance garment breathability and improve the hand feel of printed textiles. How MagicSeal™ Works

MagicSeal™ creates a smoother surface (better hand feel) on your fabric by binding your textile fibers and inks together more evenly. This reduces the rough or plasticky texture sometimes associated with DTF, DTG, or White Toner Transfer prints. The result is a softer feel and better breathability.

“

MagicSeal™ creates a smoother surface (better hand feel) on your fabric by binding your textile fibers and inks together more evenly.”

DTGPRO Management

Available in Both Sheet and Spray Options

MagicSeal™ Sheet: Applied by placing the sheet over the printed fabric and using a

heat press to bond the textile fibers and inks together (post-press). This method provides a controlled and consistent finish, ideal for those who prefer a structured application.

MagicSeal™ Spray: Applied by spraying directly onto the printed surface before the post-press, this patent-pending product is designed to embed your inks/printed image deeper into the fabric, resulting in a softer feel on the fabric, as well as better breathability.

Key Features and Benefits of MagicSeal™ Sheet and Spray

Improved Hand Feel: Prints feel softer and more natural.

Enhanced Breathability: Allows for better airflow through the design.

Additional Benefits Exclusive to MagicSeal™ Spray:

Less Powder Usage: For DTF users who preheat their transfers before powder application, this approach minimizes powder usage while allowing the MagicSeal™ to enhance the print bonding, improving the hand feel more effectively.

Faster Post-Print Production Time: Less powder usage means less time needed to cure the transfers, thereby helping to streamline workflow and increase efficiency.

Looking Ahead: MagicSeal™ Spray V2.0 Coming Q2 2025

DTG PRO is also excited to announce that MagicSeal™ Spray V2.0 is expected to be released in March or April 2025. This upgraded version will be odorless, further improving user experience while maintaining the same high-performance benefits.

The current MagicSeal™ product line, including both Sheet and Spray options, is available immediately on [DTGPRO.com](https://www.dtgpro.com).

Whether you're a seasoned printing expert or a business owner seeking to enhance and improve your printing capabilities, MagicSeal™ offers the perfect solution to elevate your products and exceed customer expectations. While designed for DTF, MagicSeal™ can also be used with DTG and White Toner apparel printing processes.
