

# ECCO Medical Launches ECCO Vein Center to Bring Comprehensive Minimally Invasive Vein Care To Colorado's Front Range

*Specialized Interventional Radiology Nurse Practitioners Now Offering Minimally Invasive Vein Treatments at Two Convenient Locations*

DENVER, PUEBLO, CO, UNITED STATES, April 8, 2025 /EINPresswire.com/ -- ECCO Medical, Colorado's leader in minimally invasive, image-guided procedures, is expanding its advanced vein care services to both its Denver and Pueblo locations. This expansion comes in response to the growing need for expert vein treatment, as over 40 million Americans suffer from [varicose veins](#) or chronic venous insufficiency—many of whom experience significant discomfort and reduced quality of life.

“

Too often, people think varicose veins are just a cosmetic issue, but untreated vein disease can lead to serious health problems”

*Aaron Kovalski, M.D.*

At ECCO Medical, we believe in precision medicine and compassionate care. ECCO Vein Center embodies this mission by providing focused venous health services designed to relieve symptoms, restore mobility, and improve quality of life.

Understanding Venous Disease: Know the Symptoms  
Chronic venous insufficiency (CVI) and varicose veins affect millions of Americans, often going undiagnosed until symptoms worsen. ECCO Vein Center encourages patients

to be aware of common signs of venous disease, including:

Aching, tired, or heavy legs

Leg swelling, particularly at the end of the day

### Painful, bulging varicose veins

Burning, throbbing, or cramping in the legs

Skin discoloration around the ankles

Restless legs at night

Slow-healing wounds or ulcers near the ankles

If you're experiencing these symptoms, early diagnosis and treatment can prevent complications and significantly improve daily comfort.

"Too often, people think varicose veins are just a cosmetic issue, but untreated vein disease can lead to serious health problems," Dr. Aaron Kovalski, Founder of ECCO Medical added. "Our goal is to educate and treat patients using the best techniques available, so they can get back to living without discomfort."

### Accurate Diagnosis with Advanced Imaging

ECCO Vein Center offers comprehensive vein evaluations, including detailed ultrasound imaging performed by experienced specialists. Our specialized IR Nurse Practitioners use ultrasound to map out diseased veins and pinpoint the root cause of venous insufficiency. This non-invasive diagnostic process is quick, painless, and completed right in our office.

### Cutting-Edge, Minimally Invasive Treatments

ECCO Vein Center specializes in modern, outpatient procedures that require no hospital stay and minimal downtime. Our treatment options include:

Endovenous Laser Therapy ([EVL](#)[T](#)): A safe, effective laser procedure that closes off faulty veins and reroutes blood flow to healthy veins.

Radiofrequency Ablation (RFA): Uses radiofrequency energy delivered via catheter to collapse diseased veins, promoting healthy circulation.

Ultrasound-Guided Foam Sclerotherapy: A targeted injection that treats both varicose and spider veins by causing them to collapse and fade.

VenaSeal™ Closure System: A unique, medical-grade adhesive that seals veins without the need for heat or anesthesia.

Microphlebectomy: Removes large varicose veins through tiny skin incisions with minimal
