# The Blogging Inbox: HackerNoon Adds Messaging to The Editing Protocol

HackerNoon's Blogging Inbox offers a faster and more streamlined communication path to HackerNoon editors.

EDWARDS, CO, UNITED STATES, April 7, 2025 /EINPresswire.com/ -- HackerNoon, the community-driven technology publishing platform, is excited to announce that it has made a major new upgrade to its platform, bringing even more options for contributing authors to communicate and receive feedback from editors.

The Blogging Inbox: HackerNoon Adds Messaging to The Editing Protocol Featured Image

HackerNoon's Blogging Inbox is a new and improved version of the now retired Notes functionality that offers a faster and more streamlined communication path to HackerNoon editors.

Instead of waiting for responses, contributing authors can now leave direct messages to editors and receive responses in real time via the new Blogging Inbox.

To use it, authors simply scroll down to the "Messages" section in their story settings (previously called Notes), type their message, and click the arrow to send. When an editor replies, authors can find their response in the same section.

All conversations are saved within the draft, making it easy for authors to keep track of their communication history.

"Blogging is collaborative," said HackerNoon Founder & CEO David Smooke. "There is someone on the other side of the screen. We've scaled HackerNoon by providing editorial support to technologists, and with this recent release of the Blogging Inbox, we've already seen notable improvement in the volume and quality of blogger and editor dialogue."

The upgrade also now features an inbox that feels just like a messaging app, where authors can view all conversations with editors related to their drafts. To access the inbox, authors can visit app.hackernoon.com/inbox and browse through their DMs.

Meanwhile, users can now seamlessly interact with HackerNoon's support team through an intuitive ticketing system accessible via the inbox. The feature enables users to submit, edit, and track support requests in real time.

Additionally, users can now react to individual messages within the platform.

Other salient features of the new Blogging Inbox include:

- Message filters such as "Open," "Closed," and "Unread" to navigate the inbox with ease
- Search function to find specific messages
- Color-coded messages and threaded replies for better readability
- Draft notes that now aggregate into continuous conversations
- Ability to open conversations directly from drafts and
- Edit and delete functionality for better control over messages
- Infinite scroll for seamless browsing through all conversations
- Mobile view optimization and native availability on the HackerNoon mobile app for easy access on the go
- More navigation options: visit our FAQs, Help section, Editing Protocol pages

The updates are designed to make users' HackerNoon experience smoother, smarter, and more collaborative. Dive in, explore, and see how these features can take your storytelling to the next level at app.hackernoon.com/inbox.
