One of the key drivers of this growth is the increasing prevalence of chronic diseases such as diabetes, cancer, and autoimmune disorders. These conditions often require long-term treatment, making subcutaneous drug delivery an attractive option for patients who want to avoid frequent visits to the doctor's office or hospital. Additionally, the rise in geriatric population and the growing demand for self-administered treatments are also contributing to the market's expansion.

The subcutaneous drug delivery market is also benefiting

from advancements in technology and the development of innovative drug delivery devices. These devices, such as autoinjectors and pen injectors, offer improved accuracy, safety, and ease

of use for patients. Furthermore, the growing trend of home healthcare and telemedicine is creating a favorable environment for the market's growth, as patients can receive their medication at home without the need for in-person appointments.

As the demand for convenient and effective treatment options continues to rise, the subcutaneous drug delivery market is expected to see even more growth in the coming years.
