

Transcend Biologics Launches TropoVet™ PRP: Advancing Regenerative Care in Veterinary Medicine

Transcend Biologics launches TropoVet™ PRP, a one-step regenerative therapy that enhances healing and recovery for pets using advanced platelet technology.

DALLAS, TX, UNITED STATES, April 10, 2025 /EINPresswire.com/ -- Transcend Biologics, a leading

“

Transcend Biologics debuts TropoVet™ PRP—a groundbreaking regenerative treatment that naturally enhances the health and recovery of pets.”

*CEO of Transcend Biologics,
Paul O'Brien*

national supplier of regenerative medicine products, announces the launch of TropoVet™ PRP, a new offering for the growing veterinary market. This release reflects Transcend's ongoing mission to introduce, educate, and support healthcare professionals with treatments that are effective, accessible, and consistently exceed expectations. Founded in 2021 from Eclipse MedCorp, LLC, Transcend brings over 30 years of expertise in medical devices and technology to emerging healthcare markets.

TropoVet™ PRP is an advanced, one-step platelet

purification system designed for veterinary applications. Engineered for ease of use, it enables on-site extraction of pure, highly concentrated platelet-rich plasma (PRP) for optimal therapeutic outcomes. This system harnesses the natural healing mechanisms to accelerate tissue repair, reduce pain, and enhance recovery in animals. Ideal for equine, canine, feline, and other species, TropoVet™ PRP allows for customized blood volume extraction, ensuring precise and effective treatment for a wide range of conditions.

Paul O'Brien, CEO of Transcend Biologics: "Our team is excited to introduce TropoVet™ PRP, a groundbreaking treatment that naturally enhances the health and recovery of pets. With more pet owners seeking non-invasive alternatives, TropoVet™ PRP has become a game-changer in treating orthopedic, musculoskeletal, dental, and soft tissue injuries."

A 2021 study published in BMC Veterinary Research titled "Platelet-rich plasma therapy in dogs with bilateral hip osteoarthritis" examined PRP's effects on working police dogs with hip osteoarthritis. The study showed that PRP therapy led to significant pain reduction and improved mobility, confirming its effectiveness as a therapeutic alternative to conventional treatments.

TropoVet™ PRP is more than just a treatment—it's a new player in regenerative veterinary medicine. By offering this innovative therapy, providers can enhance treatment outcomes and pet recovery times, expand their clinic's service offerings with a cutting-edge regenerative therapy, reduce reliance on pharmaceuticals and invasive procedures.

Stronger, Healthier Patients. Happier Clients. Get Started with TropoVet™ PRP Today!
