

Evexia Diagnostics Partners with The Dust Test to Revolutionize Home Health Assessments

*Enhancing Environmental Health Insights
for 20,000 Clinicians Nationwide*

WASHINGTON , CT, UNITED STATES,
April 29, 2025 /EINPresswire.com/ --
Evexia Diagnostics, renowned for its
comprehensive selection of cutting-
edge clinical laboratory services, is
partnering with The Dust Test to
introduce its first-ever non-body
testing service. The Dust Test, a leader
in nationwide home mold and bacteria
testing services for hypersensitive
individuals, will now be available to
Evexia's network of 20,000 clinical
practitioners.

As public awareness increases about the profound impact of indoor environments on health, the demand for thorough and precise testing has never been more critical. By partnering, The Dust Test and Evexia Diagnostics are offering a streamlined solution that provides clinicians with essential insights into environmental health factors potentially affecting their patients' well-being. This collaboration underscores the importance of indoor environments on overall health and marks a significant step towards adopting a progressive and holistic approach to healthcare.

The Dust Test, created by the founders of We Inspect and HomeCleanse, combines the latest scientific testing advancements with a proprietary interpretation model. This empowers individuals to make informed decisions about their health and has become the new standard for functional health practitioners and indoor environmental professionals to understand the impact of home environments on health.

The Dust Test uses advanced DNA and chemical sequencing technologies to identify and quantify a wide array of invisible fungal and toxic fragments in homes. This includes determining and quantifying mold species, mycotoxins, and endotoxins. Dust testing is the first step in

identifying toxic mold or bacterial problems, assessing their severity, and providing actionable insights to improve home health.

“The Dust Test is providing an indispensable service to the healthcare community. As awareness of chronic mold exposure grows, and healthcare providers become more educated about its associated conditions, The Dust Test will be integral to patient treatment and recovery plans. Most of our time is spent at home or work, and The Dust Test informs patients and healthcare providers if these environments are contributing to their health issues,” said Ryan Obermeier, Chief Commercial Officer at Evexia.

“Our partnership with Evexia Diagnostics represents a significant step forward in addressing the critical role that indoor environments play in health. With The Dust Test now available to a wider network of clinicians, we can help more people understand and mitigate the environmental factors contributing to their health issues. I am thrilled about this collaboration and the positive impact it will have on patient care,” said Brian Karr, Co-founder of The Dust Test.

About Evexia Diagnostics:

Evexia Diagnostics stands out in the clinical laboratory services landscape, catering primarily to the Functional and Integrative Medicine communities. Founded in 2007, Evexia offers comprehensive, cutting-edge laboratory services at unbeatable prices. Its proprietary infrastructure is designed to meet the needs of both licensed and non-licensed clinicians, delivering fast, affordable, and reliable solutions to enhance client efficiency and profitability.
