

Benton Vitamin C Serum is formulated for use on skin that may be exposed to increased sunlight during the spring

Benton's patented Vitamin C Serum helps support radiant, healthy-looking skin during the sunny season.

NEWYORK, NY, UNITED STATES, May 1, 2025 /EINPresswire.com/ -- As spring brings longer days and increased UV exposure, many individuals seek to maintain skin health and radiance. [Benton](#), a brand recognized for its clean beauty formulations, has introduced a [Vitamin C](#) Serum developed to address seasonal skin concerns such as dryness, dullness, and visible sun damage.

The Benton Vitamin C Serum contains 20% pure vitamin C (ascorbic acid) in a patented waterless base, utilizing moisturizing agents instead of purified water. This formulation aims to enhance the stability of vitamin C, reduce oxidation, and extend the product's shelf life-up to 30 months unopened and 6 months after opening. The serum also includes antioxidants and skin-conditioning ingredients such as glutathione, ferulic acid, vitamin E, adenosine, and ectoin, which work together to provide antioxidant protection, support the skin barrier, and help even skin tone. The product is vegan and free from alcohol, artificial fragrances, colorants, and harsh chemicals, which may be beneficial for sensitive or reactive skin.

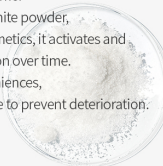

BENTON VITAMIN C SERUM

Is pure vitamin C inherently white?

Pure Vitamin C, which exhibits superior effects compared to its derivatives, fails to maintain its efficacy due to various factors such as light, water, air, and time.

While pure Vitamin C is in its raw state as a white powder, once it comes into contact with water in cosmetics, it activates and undergoes oxidation, resulting in discoloration over time. This oxidation phenomenon posed inconveniences, requiring either refrigeration or prompt usage to prevent deterioration.

To address the sensitivity of Vitamin C to external environments, a single-material, non-metal spring airless container has been utilized. This container ensures the **preservation of the fresh effects of Vitamin C**, enhances hygiene, and improves the ease of recycling.

What is the real color of Vitamin C?

Clinical trials reported by the manufacturer indicate improvements in the appearance of dark spots, skin texture, and overall brightness after two weeks of use. The serum is dermatologically tested and considered suitable for most skin types, including those that may be sensitive after sun exposure. Results may vary by individual.

For optimal results, the serum should be applied to cleansed and toned skin, followed by sunscreen during the day. Mixing with a hydrating toner or cream can enhance comfort and spreadability, particularly for drier skin types.

Benton Vitamin C Serum is available through official channels, select retailers, and online platforms, providing accessibility for those seeking advanced skincare solutions for the spring season.
