CEO-Americas*

leader in warehouse automation, is now offering robotic fulfillment as a service offering. This means that we can offer a plug-and-play automated storage and retrieval system with minimal upfront investment. This Robot as a Service system is designed for smaller spaces, 3PLs, and businesses wanting to invest in technology with a limited upfront CapEx investment.

This “Product In/Out” technology, more commonly referred to as [Pio](#) for short, delivers high-performance automation at a lower investment. This allows companies of all sizes to streamline pick, pack, and ship operations, increase

efficiency, and improve order fulfillment without the need for large-scale infrastructure.

A technology by [AutoStore](#), Pio has been entrusted to a select group of integrators—and Element Logic was an obvious choice. As the world's first and largest AutoStore distributor, and with decades of experience delivering scalable automation solutions, Element Logic brings the expertise, agility, and customer focus needed to make Pio a success.

Unlocking Automation for Growing Businesses

Traditionally, advanced warehouse automation solutions have implied Capital Expenditure, making it cost-prohibitive for specific businesses to become players. Pio eliminates this barrier by offering a model where clients can purchase the modular grid structure and bins, while renting the robots and stations that adapt to their needs. If they grow, they can have additional modules installed and add any necessary robots; ensuring a future-proof, and mainly OpEx, investment that adapts to operational needs.

“Pio is a game-changer for companies looking to harness automation without the heavy financial commitment,” Krish Nathan, CEO- Americas at Element Logic, said. “By making robotic fulfillment more financially accessible, we're enabling all businesses to take advantage of the benefits of Automation without the upfront capital investment. Benefits are saving space, reducing labor &

increased customer satisfaction. Compete at the same level as the top players out there, reduce labor-intensive processes, and enhance customer satisfaction.”

Key Benefits of Pio:

- RaaS Model – Won't impact much of your CapEx.
- Cost-Effective Automation – Reduces operational costs and increases efficiency without the need for major capital investment.
- Optimized for Limited Spaces – Compact and modular design fits seamlessly into small warehouses, backrooms, and retail environments.
- Scalable Growth – Easily expandable to accommodate increasing order volumes and business growth.
- Faster Order Fulfillment – Increases picking speed and accuracy, reducing errors and improving customer satisfaction.
- Seamless Integration – Easy to interface with the WMS and supply chain SW for smooth and quick implementation.

Designed to bring the power of automation, Pio ensures operational efficiency without the complexities of traditional large-scale automation solutions.
