

# Encompass Supply Solutions Presents New Tools for Industrial Cleaning

*Explore oil absorbent pads, foamers, mops, and asphalt cleaners for industrial use. Learn about tools that support facility hygiene and surface maintenance.*

LIVERMORE, CA, UNITED STATES, April 25, 2025 /EINPresswire.com/ -- Encompass Supply Solutions Presents New Tools for Industrial Cleaning

Encompass Supply Solutions has added a range of industrial cleaning tools to support better hygiene and maintenance in various settings. These tools serve industries such as food processing, manufacturing, and equipment maintenance.

The newly introduced products include [colour coded brushes](#), portable foamer, mop with velcro pad, [industrial chemical foamers](#), and [industrial asphalt cleaner](#).

These tools are designed to improve cleanliness and help meet industry compliance standards.

Colour Coded Brushes for Cleaner Work Zones

Colour coded brushes help maintain hygiene by keeping tools separate for different cleaning areas. They reduce the risk of cross-contamination in workplaces that need clear sanitation zones.

colour coded brushes

portable foamer

Industries like food processing and pharmaceuticals use colour-coded systems to organize cleaning tasks. These brushes fit well into existing cleaning procedures and make audit preparation easier.

### Portable Foamer for Easy, Mobile Cleaning

The portable foamer is designed for facilities needing mobile chemical cleaning. It holds up to 60 gallons and is suitable for large areas like production floors or maintenance bays.

Using foam instead of water helps save resources and gives chemicals more time to work. The portable design allows it to move between cleaning zones without being fixed in place.

### Mop with Velcro Pad for Routine Floor Cleaning

The mop with velcro pad is made for easy surface cleaning. Its trapezoid shape reaches into corners, and the velcro-style pad stays secure during use.

This mop is ideal for wet cleaning in healthcare, hospitality, and industrial settings. The velcro system makes it fast to switch pads between tasks, helping maintain cleanliness across different areas.

### Industrial Chemical Foamers for Frequent Use

Industrial chemical foamers are built for places that need frequent and reliable cleaning. These systems are used in fixed stations like clean-in-place units or automated wash lines.

They create thick foam that clings to surfaces, making it easier to clean equipment, walls, and

industrial chemical foamers

other tough areas. These foamers work with different chemical types and adjust to various pressure settings.

### Industrial Asphalt Cleaner for Heavy Residue

The industrial asphalt cleaner helps remove tar and residue from machines and surfaces. This is important in areas dealing with asphalt or bitumen-based materials.

The cleaner breaks down heavy buildup without damaging equipment. It is useful for cleaning pavers, mixers, truck beds, and shop floors. Regular use helps improve machine performance and reduce wear.

### Overview of Cleaning Solutions

Each product meets a specific cleaning need, but all work together to improve facility hygiene. These tools can be used in many settings, including factories, public works, and maintenance shops.

Key functions include:

- Colour coding for controlled sanitation zones
- Portable foamers for mobile chemical cleaning
- Velcro mops for quick and easy surface care
- Foamers for thorough, visible chemical coverage
- Asphalt cleaners for safe, effective residue removal

These tools support clean work environments, safer operations, and more efficient maintenance processes.

### Adaptability across sectors for simplified inventory and training

These tools are suitable for use in various industries, which helps streamline inventory management and simplifies training for cleaning staff. This reduces the need for multiple specialized products and improves overall workflow consistency.

### About Encompass Supply Solutions

Encompass Supply Solutions offers tools and equipment for industrial cleaning and sanitation. Products are selected for use in construction, food production, and manufacturing industries.

The tools highlighted in this release are designed for daily challenges in environments where cleanliness, safety, and compliance go hand-in-hand.
