

BioloGPT Introduces Autonomous AI Agents that Continuously Refine Answers and Perform Complete Bioinformatics Analyses

New AI Agents in BioloGPT autonomously update answers and run complete bioinformatics analyses, delivering verified results in minutes.

GOLDEN, CO, UNITED STATES, April 25, 2025 /EINPresswire.com/ -- [BioloGPT](#), the evidence-based [biology AI engine](#), today announced the launch of AI

“

Our agents think through the analysis, execute it, and iterate until the science is solid with sanity checks—compressing days of work into minutes.”

Conner Lambden

Agents, autonomous assistants that retrieve new literature, generate and execute code, and iterate until they deliver ready-to-publish bioinformatics results from a single prompt.

The new [AI biology agents](#) deliver continuously improving responses by updating answers in real time, integrating newly discovered studies and re-running analyses to strengthen every conclusion. They automate the full

analytical workflow—from single-cell quality control and differential expression to structural modeling—so users receive high-resolution figures and fully documented methods without manual scripting. Each statement is linked to primary literature, ensuring transparent, verifiable evidence. AI Agents are enabled for all BioloGPT accounts, including the free tier, and require no local software installation.

By removing routine coding overhead, BioloGPT’s agents aim to shorten research cycles in much the same way DeepMind’s AlphaFold accelerated protein-structure prediction.

The agents have full toolchain access – Integrated Python, shell, web, SQL, AI image models, and more let the agent handle diverse bioinformatics workflows and produce interactive visualizations without manual intervention. Biology AI Agents are available now.
