# Silent Push Unveils Enhanced Threat Intelligence Management Module to Preemptively Identify Emerging Threats

Silent Push has announced its new Feed Scanner interface, providing full access to the most comprehensive DNS and web content database available anywhere.

RESTON, VA, UNITED STATES, April 29, 2025 /EINPresswire.com/ -- Silent Push, a leading preemptive cybersecurity intelligence company, announced today the release of its new Feed Scanner interface within the Threat Intelligence Management module. The Silent Push solution provides full access to the most comprehensive Domain Name System (DNS) and web content database available anywhere on the Internet.
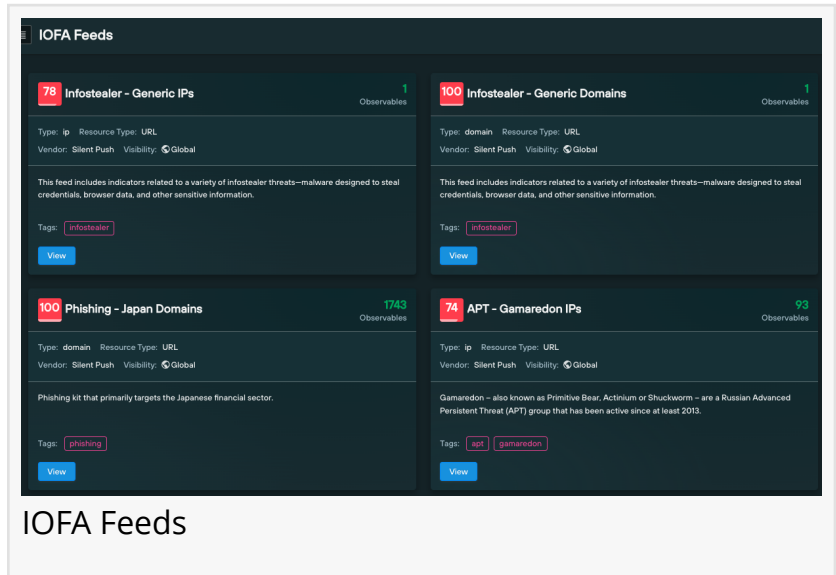

IOFA Feeds

New features released include additional automation functionality and expanded search capabilities that provide seamless access to the entirety of the company's enriched feed data, empowering enterprise organizations to rapidly detect and proactively protect against adversaries using Indicators Of Future Attack™ (IOFA™).

> The ability to respond swiftly and effectively to growing cyber threats is mission critical for any organization"
> *Ken Bagnall, Silent Push CEO*

"The ability to respond swiftly and effectively to growing cyber threats is mission critical for any organization," said Ken Bagnall, CEO and Co-Founder of Silent Push. "Yet, many continue to struggle with IOC-based legacy threat intelligence that lacks real-time data to produce actionable insights. Our latest enhancements demonstrate our commitment to deliver the features needed and requested by our customers to uncover lurking threats and counteract hidden infrastructure yet to be used."

With bad actors constantly obfuscating their attacks and changing their Tactics, Techniques, and Procedures (TTPs), most of today's IOC-based threat intelligence is stale and outdated. CISOs,

SOC teams, threat and security analysts, incident response teams, and security architects need a complete view of a threat and more ways to quickly see Indicators Of Future Attack™ (IOFA™).

The new dedicated IOFA™ feeds section within the Threat Intelligence Management module and new IOFA™ feed highlights within the Total View screen transform the experience for security teams. In addition, Silent Push will continue to deliver TLP Amber reports–finished intelligence that provide a comprehensive breakdown of how to detect and block high-profile adversaries and common attack vectors.

Key product features and benefits include:

New Feeds Scanner Interface: Security teams can search the entirety of their enriched feed data, query the feed data, save and share their searches within the organization, and export results.
Customer Feeds API: Organizations can create and manage feeds through a dedicated API, enabling them to automate the creation, addition of indicators/tags, and management of their own feeds. OpenAPI compliant, the new feature provides a specification file that defines the structure and syntax in a programming language agnostic way and enhances user documentation.
Threat Check API/DNS-Based Lookups: Designed to handle high volumes of traffic, organizations can now check for indicators on any of the IOFA™ feeds, run all indicators in their logs, or check incoming email domains. Enterprise customers will have unlimited access to this new feature.

With the new and enhanced capabilities from Silent Push, organizations will preemptively discover hidden threat infrastructure easier, reveal traceable attacker digital fingerprints faster, and receive action ready-made intelligence. To learn about how attackers are evolving, why preemptive intelligence is critical to your cyber defense, and how Silent Push tracks hidden threats, read our Threat Actor Study.

Meet the Silent Push team. Attend a presentation or stop by our booth at these upcoming events:

RSA Conference
When: April 28-May 1, 2025
Where: San Francisco, CA
Meet with our team

TechNet Cyber AFCEA
When: May 6-8, 2025
Where: Baltimore, MD
Come see us at booth #2860

Attend our presentation in the SIGNAL Innovation Theater "Preemptive Threat Intelligence: Disrupting Adversary Operations Before They Strike"

FS-ISAC EMEA Summit
When: May 20-22, 2025
Where: Brussels, Belgium

About Silent Push

Silent Push is a preemptive cybersecurity intelligence company. It is the first and only solution to provide a complete view of emerging threat infrastructure in real-time, exposing malicious intent through its Indicators Of Future Attack™ (IOFA™) data to enable security teams to proactively block hidden threats and avoid loss. The Silent Push standalone platform is also available via API integrating with any number of security tools, including SIEM & XDR, SOAR, TIP, and OSINT providing automated enrichment and actionable intelligence. Customers include some of the world's largest enterprises within the Fortune 500 and government agencies. Free community edition is available.
