

# Provider Passport Streamlines Provider Management to Save Time, Increase Revenue, and Boost Efficiency

*The unified platform streamlines enrollment, credentialing, privileging, and provider data management to accelerate onboarding and revenue*

NEW YORK CITY, NY, UNITED STATES,  
May 1, 2025 /EINPresswire.com/ --

[Provider Passport](#) is a unified platform that transforms healthcare administration by automating provider data management, credentialing, privileging, peer reviews, license renewals, enrollment, and ongoing monitoring — all through a single, AI-powered system designed to streamline workflows, accelerate onboarding, and optimize operational efficiency. Designed to ease the growing administrative burden on health systems, Provider Passport

combines advanced automation with a centralized platform to help organizations reduce costs, accelerate onboarding, and improve operational efficiency.

Historically, healthcare organizations have been forced to manage provider information across multiple systems, resulting in delays, costly errors, and heavy administrative workloads. Provider Passport replaces fragmented systems with a fully integrated platform powered by TruMation™ — its proprietary true automation technology — consolidating enrollment, credentialing, privileging, and provider data management into one seamless, end-to-end solution.

“Healthcare systems today cannot afford inefficiencies in provider management. Every day lost to paperwork and manual processes impacts patient care and financial health,” said Harman Dhawan, Founder and CEO of Provider Passport. “We built Provider Passport to transform how health systems manage providers — saving time, reducing errors, and allowing healthcare

leaders to focus on what matters most: delivering quality care.”

Provider Passport’s comprehensive approach offers four key services:

- Provider Data Management: Aggregates and maintains provider data across 600+ primary sources, eliminating manual data entry and minimizing compliance risks.
- Credentialing: Automates primary source verification, significantly reducing credentialing turnaround times from an industry average of 60–90 days to just minutes.
- Privileging: Instantly initiate privileging requests and board approvals, reducing privileging turnaround times by up to 50% compared to traditional processes.
- Enrollment: With a catalog of over 4,500 mapped payer plans, Provider Passport automates payer application filing and follow-up, cutting enrollment timelines by up to 88%.

Through these capabilities, Provider Passport delivers measurable value: faster provider onboarding, reduced revenue loss from delayed credentialing, and lower operational costs across health systems.

Provider Passport’s unified solution has already gained traction among hospitals, health systems, and large physician groups seeking to modernize their provider management strategies. With built-in integrations to EHRs, EMRs, and compliance databases, the platform is designed to fit seamlessly into existing healthcare infrastructures.

“Automation is no longer optional. It’s essential for health systems that want to stay competitive and financially healthy,” Dhawan added. “Provider Passport offers a new standard — one where healthcare administration is smarter, faster, and aligned with the demands of modern care delivery.”

#### About Provider Passport

Provider Passport is a leading healthcare technology company focused on transforming provider management through advanced automation. Its unified platform simplifies enrollment, credentialing, privileging, and provider data management, helping healthcare organizations improve efficiency, reduce administrative burden, and deliver better care.
