

ISAAC Certified by U.S. Department of Defense for Use in Sensitive Shipments

Achievement highlights continued innovation of the ISAAC telematics platform

CLEVELAND, OH, UNITED STATES, May 12, 2025 /EINPresswire.com/ -- [ISAAC Instruments](#) today announced its platform with satellite communication has been approved by the U.S. Department of Defense (DoD) for use by motor carriers hauling military shipments requiring enhanced surveillance capabilities.

Truck driver with ISAAC tablet

The official Defense Transportation Tracking System (DTTS) certification for the ISAAC platform was granted by DoD in mid-April. It was achieved after ISAAC met stringent requirements, including HERO certification for electromagnetic radiation, and undergoing other exhaustive testing.

“

We know every shipment is critical for our clients. Obtaining DTTS certification highlights the expertise and reliability that ISAAC can offer trucking fleets, regardless of what they are hauling.”

Sam Sussenguth, Chief Sales and Marketing Officer, ISAAC

“ISAAC is honored to achieve this certification and considers it a tremendous privilege to be a trusted technology partner by the U.S. Department of Defense,” said Jacques DeLarochelliere, ISAAC’s CEO and co-founder. “Our team strives every day to help simplify trucking and develop innovative ways to make highways safer.”

ISAAC offers in-cab technology that goes far beyond typical electronic logging devices (ELDs). ISAAC is a true all-in-one solution, handling software, in-cab tablet, charging dock, cameras, and integration needs. ISAAC’s automated

workflow minimizes screen clicks to update hours-of-service (HOS) logs, while the real-time, in-cab ISAAC Coach feature is scientifically proven to increase both fuel efficiency and safety.

Only an elite group of motor carriers qualify for DTTS, which monitors DoD’s sensitive and

hazardous materials shipments, including arms, ammunition and explosives. The [Military Surface Deployment and Distribution Command](#) (SDDC) oversees the closed-loop tracking program, ensuring the security of these shipments and facilitating emergency response if required.

Two of the trucking fleets that are part of DTTS each conducted successful pilot projects using the ISAAC platform as part of ISAAC's certification process.

"It takes tremendous sophistication for motor carriers and technology providers to serve the U.S. military and move these critical shipments," said Sam Sussenguth, Chief Sales and Marketing Officer at ISAAC. "At ISAAC, we know every shipment is critical for our clients. The ability to obtain DTTS certification highlights the expertise and reliability that ISAAC can offer trucking fleets, regardless of what they are hauling."

About ISAAC Instruments

ISAAC partners with North American fleets to simplify trucking with a reliable, user-friendly platform and in-cab technology that goes way beyond ELDs. We help carriers reduce costs and keep the wheels turning while boosting safety, compliance, and driver happiness. ISAAC's real-time, in-cab coaching fosters eco-driving for significant fuel savings and safer highways. With ISAAC's open platform and advanced systems integration, you can integrate all your business apps on a single device and keep your drivers and office team working smoothly. Add artificial intelligence (AI) reporting for informed decision-making, and you're all set. ISAAC is the market leader in Canada and growing rapidly among top fleets across the United States. We are a proud member of the Allied Committee for the Trucking Industry (ACT 1), an elite group of suppliers committed to industry improvement. For more information, visit www.isaacinstruments.com.
