

Synametrics Technologies Announces the release of new version of Xeams 9.7 (build 6368)

With Enhanced DMARC Reporting and Security Upgrades.

MILLSTONE, NJ, UNITED STATES, May 13, 2025 /EINPresswire.com/ -- Synametrics Technologies is proud to announce the release of Xeams 9.7, the latest version of its comprehensive, on-premise email security and management solution. With a strong focus on user experience, performance, and security, Xeams 9.7 introduces a suite of new features and enhancements designed to give administrators even greater control, visibility, and flexibility.

Xeams: Trusted Email Security for All Businesses

Xeams is an on-premise as well as cloud email security solution designed to protect against spam, malware, phishing, ransomware, and IP leakage, while also providing end-to-end encryption. Its adaptive filtering system ensures that legitimate emails are delivered while effectively blocking threats.

The solution offers advanced junk mail filtering, real-time monitoring, automatic email archiving, and clustering for high availability. It includes reporting and analytics tools that allow administrators to track email traffic and identify security risks.

Xeams supports flexible deployment options, functioning as a standalone email server, a smart

email firewall, or in hybrid mode alongside existing mail servers. Additionally, it is compatible with [legacy devices](#) that do not support OAuth 2.0, acting as a bridge to platforms like Google Workspace and Microsoft Exchange Online. This integration is seamless, requiring no complex programming changes, even in networks with restricted IP addresses. Xeams Single Sign-On (SSO) utilizes OAuth 2.0, enabling organizations to connect Xeams with major identity providers like Microsoft and Google. This integration simplifies user access and enhances overall security. By managing user authentication through these reliable platforms, the sign-in process is streamlined, allowing for secure access across various accounts.

Improved filters for identifying fraudulent PayPal receipts, MTA-STS exceptions for specific domains, and the automatic removal of inactive users from Active Directory. Xeams also improves the handling of unsafe images by removing the Content-Security-Policy header before displaying them.

Overall, Xeams continues to provide robust, flexible, and secure email protection for organizations of all sizes, ensuring that their email systems remain secure, compliant, and reliable.

Xeams 9.7 introduces several significant enhancements that strengthen email protection, improve system performance, and provide a better administrative experience.

The update includes:

1. [Enhanced DMARC Reports](#): DMARC reporting has been enhanced to offer improved visibility and actionable insights for administrators. These reports are generated by external email providers such as Gmail, Yahoo, and Outlook.com, and reflect how your outbound messages are perceived on their end. With better visualization and easier access to this data, administrators can more effectively identify unauthorized senders, validate SPF and DKIM configurations, and maintain a secure and trustworthy email domain.
2. Theme Preview for UI Customization: Administrators can now preview and customize the web interface's color scheme, making the user experience more personalized and visually appealing.
3. Optimized SPF Lookups: Improves SPF validation performance and accuracy, ensuring faster and more reliable results for email security checks.
4. SPF Test Tool: A dedicated tool to help administrators easily validate SPF configurations, ensuring that outgoing email is properly authenticated and reducing the risk of spoofing.
5. Improved Let's Encrypt Integration: Reduces certificate request errors by ignoring hostnames that fail DNS resolution during challenge-response processing, simplifying SSL certificate management.

6. E2E Encryption UI Improvement: After logging in, users now see convenient links for password reset and logout, improving overall account management.

7. Pre-Approval Plugin Update: New variables are now available for dynamic email templates, enhancing customization options for message approvals.

8. Time Zone Control for Quarantine Reports: Admins can now enforce the system's default timezone for quarantine reports, ensuring consistency in report timestamps.

Availability

Xeams 9.7 is now available for download. To learn more about Xeams and its features, please click [here](#).

Existing users can upgrade using the built-in update manager, while new users can begin with a free trial at <https://www.xeams.com/XeamsDownload.htm>.

About Synametrics Technologies:

Synametrics Technologies is committed to providing advanced solutions for enterprise-grade email security. Through its Xeams product line, Synametrics continues to help organizations protect their digital communications, prevent security breaches, and ensure compliance with the latest industry standards.
