

# Tremor-Free in Minutes: Miami Neuroscience Center Launches Breakthrough Focused Ultrasound Treatment

*No surgery, no recovery time, tremors GONE in minutes! Patients experience rapid relief from essential tremors with this groundbreaking, non-invasive treatment.*

MIAMI, FL, UNITED STATES, May 13, 2025 /EINPresswire.com/ -- Imagine being free from hand tremors in just

one day, without a single incision. That's now a reality for patients at the [Miami Neuroscience Center at Larkin](#), where the FDA-approved [Focused Ultrasound](#) treatment is transforming lives.

“

Focused Ultrasound is a powerful, life-changing solution for essential tremor that finally offers relief without surgery.”

*Dr. Aizik Wolf*

This innovative, non-invasive therapy is a game changer for individuals suffering from Essential Tremor (ET), a neurological condition that affects over 10 million Americans and makes everyday tasks like drinking from a cup or writing a note nearly impossible. Until now, treatment options were limited to lifelong medications with side effects or invasive brain surgeries such as deep brain stimulation. Focused Ultrasound offers a completely new approach — one that requires no scalpels, no

anesthesia, and no recovery time.

The procedure, led by internationally recognized neurosurgeon [Dr. Aizik Wolf](#), uses highly concentrated sound waves to precisely target the brain area causing the tremor. Guided by real-time MRI, the ultrasound beams create a therapeutic effect that eliminates the tremor within minutes.

"This technology allows us to treat the root cause of the tremor with extreme precision, without the need for incisions," said Dr. Aizik Wolf, Medical Director of the Miami Neuroscience Center. "The results are immediate, and the improvement in quality of life is profound."

The outpatient procedure typically lasts 2–3 hours, and patients go home the same day, with a steady hand and a renewed sense of independence. The technology is especially beneficial for those who may not be candidates for surgery or who want to avoid the risks associated with general anesthesia.

The Miami Neuroscience Center at Larkin is one of the few specialized centers in the United States offering Focused Ultrasound for Essential Tremor. Its arrival in South Florida underscores Larkin Health System's commitment to bringing cutting-edge, patient-centered care to the community.

#### Who Is a Candidate?

Patients diagnosed with Essential Tremor who have not responded well to medications or are seeking alternatives to invasive procedures may qualify. A comprehensive evaluation at the Miami Neuroscience Center will determine individual eligibility.

#### A Breakthrough for South Florida

With Focused Ultrasound, Larkin continues to pioneer advanced treatments that put patient safety, comfort, and rapid results at the forefront. As this technology becomes more widely available, it holds the potential to revolutionize care for not only Essential Tremor but other neurological conditions in the future.
