

# Toronto Plumbing Upgrades: Health and Safety

*In the past, lead was commonly used for plumbing until it was discovered to have toxic properties.*

TORONTO, ONTARIO, CANADA, May 26, 2025 /EINPresswire.com/ -- In the past, lead was commonly used for plumbing until it was discovered to have toxic properties. When it undergoes

corrosion, it impacts water quality, and can adversely affect your safety.

If you are faced with the need to replace the plumbing in your homeownership, office, trust [Toronto plumber](#). The specialists at Rooter Team offer safe and durable plumbing solutions.

Why is it important to replace lead pipes?

Until the middle of the 20th century, strong and flexible lead pipes were used for water pipelines. But recent studies have revealed that the metal has a negative impact on human health.

Prolonged exposure to the metal causes disruption of the nervous system, kidney disease and other equally dire consequences. Pregnant women and children are most at risk.

Toronto's government has taken a number of steps to remove lead from public water supplies.

Despite the efforts, more than 30,000 private households still have lead pipes. Therefore, checking water contamination levels should be a priority for every homeowner, especially if:

- house built before 1955;
- a positive test for lead in the water;
- metallic taste of water;
- low pressure.

In this case, expert services will be required to replace outdated piping with modern alternatives.

Rooter Team – the best choice in Toronto

Rooter Team has been providing professional [plumbing services in Toronto](#) for years. During this time, thousands of consumers have been served by our:

- affordable prices;
- transparent contract terms;
