

Global Electronic Services (GES) Powers Leading Manufacturers with Expert Servo Motor and Drive Repairs

The world's most demanding industries are leveraging Global Electronic Services (GES) because automated production lines require no margin for guesswork.

BUFORD, GA, UNITED STATES, May 20, 2025 /EINPresswire.com/ -- Automated production lines going down lead manufacturers to analyze root causes. Their clients are attesting that they stick with GES because "every second counts, every motor is critical, and every repair must be precise." This urgency is why some of the world's most demanding industries rely on Global Electronic Services (GES).

Portable Appliance Testing

From high-speed bottling plants to CNC machining centers and semiconductor fabs, manufacturers turn to GES because of their reputation for "cutting downtime and repair costs in half." As one client, Albert from Dublin, GA, states, "Everyone has treated our problems as if they were their own. People do not find this type of service anymore." With fast, OEM-quality [repairs on servo motors and drives](#) — there are zero shortcuts. GES is recognized as a precision partner trusted by Tier 1 suppliers, Fortune 500 manufacturers, and specialty manufacturers.

“

GES returning customer rate ranks over 98% since they started and their goal is said to be 110% customer satisfaction.”

Umesh Mahajan, Marketing Analyst

When servos fail, GES clients require restored performance that aligns with original specifications and withstands

production demands at any hour. They serve companies in the following sectors:

- Automotive and EV Production: where rapid repair solutions maintain the functionality of

robotics, conveyors, and welding equipment in line with factory specifications.

- Aerospace and Defense: adhering to strict safety protocols, ensuring mission-critical servo repairs meet the highest industry standards.
- Food and Beverage Packaging: for fast, hygienic servo reconditioning, supporting manufacturers in maintaining USDA and FDA compliance.
- Plastics and Injection Molding: ensuring precise clamping force and positioning accuracy, crucial for consistent part quality.
- Logistics and Fulfillment: when quick turnaround on servo repairs prevents bottlenecks in automated sorting and distribution systems.

Since its founding, GES has track record of rebuilding tens of thousands of servo motors and drives. This experience translates to identifying recurring faults in specific brands, understand complex failure modes, and detect minor issues that could indicate larger problems.

GES's repair approach is said to "go beyond simple replacement. Each repair is a complete restoration to full function, with alignment verification and rigorous testing." Mike from Norcross, GA states: "Global Electronic Services, Inc. has been a breath of fresh air. Before finding them, a competitor said that a lot of items that they said were fixed but were not. Globals' work is just what they say it is! If it's fixed, then it's fixed."

Their process includes:

- Testing under load rather than just for continuity
- Complete disassembly, down to bearings, seals, windings, and wiring harnesses
- Comparison with OEM specifications, flagging any deviations
- Simulation of real-world conditions during final testing

The team is credited for redefining speed, where fast service means precision with urgency. As noted on their website, "The company stands by their [standard, rush, and emergency service options](#), backed by skilled technicians, in-house test equipment, and a parts inventory ready for same-day repair starts." They're "about getting equipment back into production fast and correctly."

Sam in Canton, OH shares, "A few months back GES repaired some Reliance variable frequency controls that were at least one if not two generations old. A call came in from a customer extolling the amazing job GES did in not only completely fixing the drives but making them look like new. We have sold electrical repair for years thru a number of outlets and have NEVER received that kind of response from an end user."

GES clients are said to return because of their quality and reliability. The company's strong client relationships are reported to be built on:

- Service reports with detailed diagnostics

- Turnaround times across repair types
- Account representatives who understand client production schedules.
- A one-year warranty covering the entire repair, not just parts.
- Technical support extending beyond the repair bench.

GES leaderships say that "these relationships are built on results, not just promises. Dedicated experts are taking calls 24/7 and serve over 60,000 of the largest and most advanced manufacturers and distributors across the world, keeping their operations running smoothly."
