Forsyte I.T. Solutions Launches Advanced Patch Management & Data Security Services to Strengthen Cyber Threat Protection

RICHMOND, VA, VA, UNITED STATES, May 20, 2025 /EINPresswire.com/ -- In a bold step to help organizations outsmart today's sophisticated cyber threats, Forsyte I.T. Solutions (Forsyte) is proud to announce the launch of two powerful new cybersecurity services: Patch Management and the Data Security Managed Services. These innovative solutions are designed to keep businesses' defenses sharp, their data secure, and their compliance requirements met in an ever-changing threat landscape.

Addressing the Modern Cybersecurity Challenge

In 2025, cyberattacks are more targeted, frequent, and damaging than ever before. Organizations face daily risks from ransomware, data breaches, and zero-day vulnerabilities-all of which can have devastating financial and reputational consequences. According to recent industry reports, over 60% of successful breaches exploit known vulnerabilities that could have been prevented with timely patching and better data visibility.

Recognizing these pressing challenges, Forsyte has introduced its new Patch Management and Data Security Managed Services to equip organizations with the proactive tools and expert support required to stay ahead of cyber threats.

Forsyte remains dedicated to enhancing its Guardian 365 services by incorporating patch management and data security managed services. The Patch Management service ensures that all critical and security patches are regularly updated and monitored, providing protection against zero-day attacks that may result from operating system vulnerabilities.

In addition to patch management, Forsyte offers a data security managed service. This service aims to protect sensitive data from exposure through various sources, including AI. The data security managed service implements security policies and monitors them continuously on a 24/7 basis.

Key Features of Forsyte's Patch Management Service:

- Comprehensive Inventory: Gain a clear, real-time inventory of all devices and software within your organization, including their current patch status and maintenance needs.

- Vulnerability Prioritization: Leverage advanced vulnerability assessment tools to identify and prioritize the most critical security gaps, ensuring that the most urgent threats are addressed first.
- Safe, Staged Deployment: Benefit from tiered patch rollouts that minimize operational disruption. Patches are tested and deployed in stages, reducing the risk of downtime or compatibility issues.
- Seamless Azure Integration: Integrate effortlessly with Microsoft Azure Arc, Update Manager, and Intune, providing unified control and visibility across on-premises, cloud, and hybrid environments.

"At Forsyte I.T. Solutions, we constantly strive for excellence. Patch management and Data Security Managed Services are just part of our ongoing improvements to Guardian 365. These measures help me sleep better at night, knowing we're proactively preventing unauthorized access to customer environments, and thus benefiting both Forsyte and our valued customers."
- Chuck McBride, CEO, Forsyte I.T. Solutions

Key Benefits of the Data Security Managed Services:

- Instant Identification of Exposed Data: Quickly discover where sensitive data is stored, who has access to it, and whether it is exposed to unnecessary risk.
- Continuous, Real-Time Monitoring: Monitor for risky user actions, policy violations, and potential threats around the clock, ensuring that issues are detected and addressed before they escalate.
- Stronger Compliance and Breach Protection: Meet and exceed regulatory requirements with advanced data protection measures, audit trails, and automated compliance reporting.
- Actionable Insights: Receive clear, actionable recommendations to remediate risks, tighten access controls, and lock down your most critical data.

"Data is an invaluable asset for modern organizations, but it can become a major liability if not properly protected. Forsyte's Guardian Data Security Managed Services solution provides security teams with the tools and insights needed to identify risks before they turn into incidents, safeguarding sensitive information and ensuring regulatory compliance." - Chuck McBride, CEO, Forsyte I.T. Solutions

Why Forsyte I.T. Solutions?

Forsyte I.T. Solutions has built its reputation on delivering tailored, proactive cybersecurity solutions that go beyond traditional, reactive approaches. The company's team of experts works closely with each client to understand their unique environment, challenges, and goals-crafting customized strategies that address both immediate needs and long-term objectives.

With Forsyte, clients benefit from:

- Deep Expertise and Hands-On Support: Access to a team of cybersecurity professionals with years of experience protecting organizations across industries.
- Customized Strategies: Solutions are designed to fit each organization's specific infrastructure, risk profile, and compliance requirements.
- Proactive, Prevention-First Approach: Rather than waiting for threats to materialize, Forsyte focuses on prevention, early detection, and rapid response.

Forsyte's Guardian 365 platform, which underpins these new services, provides 24x7x365 protection, leveraging industry-leading tools and a dedicated security operations center (SOC) to keep clients ahead of emerging threats.

Transform Your Cybersecurity Strategy Today

The launch of Patch Management and Data Security Managed Services marks a significant milestone in Forsyte's mission to empower organizations with the tools and expertise they need to thrive in a digital world. These services are available immediately and can be seamlessly integrated into existing Forsyte managed security packages or deployed as standalone solutions.

Ready to boost your security posture?

Contact Forsyte today to schedule a consultation and discover how Patch Management and the Data Security Managed Services can transform your cybersecurity strategy-so you're not just reacting to threats, but staying steps ahead.

About Forsyte I.T. Solutions

Forsyte I.T. Solutions is a leading provider of managed security services, helping organizations of all sizes protect their data, systems, and reputation in an increasingly complex threat landscape. With a focus on innovation, expertise, and customer success, Forsyte delivers peace of mind and measurable results for clients across industries.
