Company*

growing adoption of life-cycle assessments in food production, expansion of organic farming, transition to climate-resilient crop varieties, and an upwards trend in embracing algae- and fungi-based protein sources.

Forecast for the next few years paint a promising picture for the carbon neutral food market. With a projected size of \$136.38 billion by 2029 and a CAGR of 9.5%, the market is set to ride the wave of ethical consumerism and demand for sustainable and eco-friendly food. There is a growing awareness among consumers about the carbon footprints

in food production, and this is leading to a surge in demand for plant-based and alternative protein sources.

production, adoption of lab-grown and precision-fermented foods resulting in lower emissions, and increased use of renewable energy in food processing and packaging.

Sustainable food preferences are sharply steering the growth of the carbon-neutral food market. As consumers become more aware of the environmental consequences of traditional food production systems, there is an increasing demand for food produced, processed, and consumed in ways that don't impede the health of the planet. Heightened consciousness about carbon emissions, resource depletion, and biodiversity loss linked with conventional agriculture and industrial food systems is also contributing to this shift.

Corporations like Sodexo continue to uphold sustainable practices. In 2024, a report published by this France-based company mentioned that 68% of consumers echoed positive sentiments about sustainable food—comparable to the 69% recorded in the previous year. This drives home the point that consumers now want to know where their food is sourced from, how it's produced, and the extent to which it impacts the environment.
