

Simmitri Inc. Expands Access to U.S.-Made Solar Technologies Amid Supply Chain Concerns

Simmitri Inc. Offers Bay Area Property Owners a Smart, Tariff-Resistant Solar Option with Trusted American-Made Products and GAF Energy Partnership

SAN JOSE, CA, UNITED STATES, May 30, 2025 /EINPresswire.com/ -- As U.S. property owners face growing uncertainty surrounding solar tariffs and global supply chain disruptions, Simmitri Inc., a Bay Area-based solar and roofing company, is responding with a strategic shift toward American-made solar technologies. The company has strengthened its supplier network with leading domestic manufacturers, including GAF Energy, Silfab Solar, Qcells USA, Tesla Energy, Enphase, and IronRidge.

This move allows Simmitri to offer residential and commercial customers access to high-quality solar systems that are less vulnerable to international trade fluctuations. With nearly 30 years of service in California's energy sector, Simmitri is reinforcing its commitment to resilient, future-proof solar investments.

Building Certainty in Uncertain Times

Tariff volatility and shipping backlogs have complicated solar procurement for many property owners. "Our clients are asking important questions about system availability, pricing stability, and long-term performance," said Jonathan Garcia, CEO of Simmitri Inc. "We've listened—and responded by partnering with U.S.-based manufacturers to mitigate these risks."

Simmitri's current technology lineup now features American-made products known for consistent performance, long warranties, and local availability. These include:

- GAF Energy Timberline Solar™ Shingles – Made in the U.S., these nailable shingles integrate solar power directly into roofing materials, combining aesthetics with energy production.
- Silfab Solar – Manufactured in Washington state, Silfab panels are designed for durability and tailored to North American conditions.
- Qcells USA – Operating one of the largest solar manufacturing plants in Georgia, Qcells supports both residential and commercial energy projects.
- Tesla Energy – Tesla's U.S.-assembled solar panels and Powerwalls offer sleek design and robust energy storage for homeowners.
- Enphase Energy – Known for its advanced microinverters and storage systems, Enphase products are assembled in the U.S. and offer superior monitoring and reliability.
- IronRidge – California-based IronRidge supplies durable solar racking solutions for structural integrity and code compliance.

“

Our clients are asking important questions about system availability, pricing stability, and long-term performance... We've listened...”

Jonathan Garcia, CEO

Domestic Sourcing Still Faces Constraints

While domestic manufacturing reduces reliance on foreign imports, industry-wide demand is placing pressure on available stock. Labor shortages and raw material delays are contributing to extended lead times—even for U.S.-made components.

“Just because it’s made in America doesn’t mean it’s immune to demand spikes,” Garcia added.

“We’re encouraging customers to plan ahead and reserve materials early to avoid installation delays.”

Commitment to Long-Term Energy Solutions

Simmitri’s full range of services spans beyond solar panels. With a track record of 5-star reviews and community impact, the company offers:

Simmitri Solar Services

- [Residential & Commercial Solar Installations](#)
- Battery Storage Systems
- EV Charging Station Installation
- Smart Energy Consulting
- [GAF Solar Roofing Systems](#)
- [Roof Installation, Maintenance, and Replacement](#)

Operating across San Jose, Santa Clara, Campbell, Los Gatos, and surrounding Bay Area cities, Simmitri’s team of experts continues to support the shift toward cleaner, more reliable energy sources.
