

Kandupay Acquires Cingularity, Paving the Way for Nation's First Neuroscience-Driven Defense Company

NEW YORK, NY, UNITED STATES, May 30, 2025 /EINPresswire.com/ -- In a decisive move that reshapes the landscape of national security technology, KanduPay, Inc. ("KanduPay"), led by David M. Roosevelt, Founder, Chairman, and CEO, has completed the acquisition of Cingularity, a deep-tech intelligence company holding over \$300 million in intangible assets, including

“

KanduPay exists to protect sovereign futures—financially, technologically, and now, defensively, said Roosevelt. This is not a startup. This is a national imperative.”

David M. Roosevelt

sovereign IP portfolios and classified neuroadaptive prototypes. This acquisition signals the formal retirement of Cingularity and the launch of a new, next-generation national defense company—the first in U.S. history to fuse neuroscience, AI, and tactical drone infrastructure into a unified sovereign platform.

Helmed by Micah Brown and Yusuf Henriques, the new entity will integrate critical programs including:

- The Lazarus Drone System, a neural-command fleet capable of live combat decision-making through brain-

computer interfaces

- Predictive Defense Protocols (PDPD) engineered for anticipatory warfare and threat modeling
- Genome-variant cognitive analytics and neurobiometric tools for battlefield readiness and psychological defense
- U.S.-based manufacturing in Baltimore, the greater DMV area, and North Carolina, creating a sovereign tech corridor for defense resilience

This unprecedented spinout is being backed by KanduPay's financial architecture and will draw capital from a structured DIP process involving a mezzanine of large banks, enabling the strategic unwinding of legacy assets while activating forward-operating capital.

“This isn't just the end of Cingularity—it's the beginning of something that's never existed,” said Micah Brown, architect of multiple frontier ventures including BrainRap and Centiment. “We are building the cognitive shield of a new era. Defense is no longer just physical—it's perceptual, anticipatory, and rooted in neurobiological sovereignty.”

“For decades we've watched the gaps—between veteran care, battlefield intelligence, and

predictive infrastructure,” said Yusuf Henriques, a military veteran and CEO of INDYGENEUS. “Now we’re closing them. This is what it means to defend the nervous system of a nation.”

David M. Roosevelt, CEO of KanduParam, underscored the historical weight of the acquisition.

“KanduParam exists to protect sovereign futures—financially, technologically, and now, defensively,” said Roosevelt. “This is not a startup. This is a national imperative.”

This marks the official sunset of Cingularity, FilmFundr, Centiment, and BrainRap—whose intellectual legacies, codebases, and defense-aligned patents are now being consolidated into the new structure. Rather than fragmenting these breakthroughs, KanduParam, Inc is ensuring their full unification under federal-grade oversight, sovereign governance, and long-term R&D pathways.

The new defense company is scheduled for formal launch in late Q3 2025, with pilot contracts, neuroadaptive drone demonstrations, and multi-agency briefings already underway.

The United States is not merely adding another defense contractor to its roster; it is establishing a new frontier of sovereign capability: neurodefense.
