years, driven by the increasing demand for minimally invasive procedures and the rising prevalence of [cardiovascular](#) diseases. Atherectomy is a minimally invasive procedure used to remove plaque from arteries, reducing the risk of heart attacks and strokes. This market growth is expected to benefit patients, healthcare providers, and manufacturers alike.

The rising prevalence of cardiovascular diseases, such as coronary artery disease and peripheral artery disease, is a major factor driving the demand for atherectomy devices.

Additionally, the increasing adoption of minimally invasive procedures by healthcare providers and patients is expected to further fuel market growth.

The market is also seeing a rise in technological advancements, with companies investing in research and development to improve the efficacy and safety of atherectomy devices. For instance, in March 2021, Medtronic received FDA approval for its IN.PACT AV drug-coated balloon, which is used in conjunction with atherectomy for the treatment of peripheral artery disease. This approval is expected to boost the demand for atherectomy devices and further drive market growth.

The atherectomy devices market is highly competitive, with key players such as Boston Scientific

Corporation, and Medtronic dominating the market. These companies are focusing on strategic partnerships, mergers and acquisitions, and product launches to expand their market share. With the increasing demand for minimally invasive procedures and the continuous advancements in technology, the atherectomy devices market is expected to witness significant growth in the coming years, providing better treatment options for patients with cardiovascular diseases.
