

Enkrypt AI Releases Latest Version of their AI Compliance Management Solution

New solution automates regulatory alignment, reduces manual review, and brings transparency to enterprise AI governance

BOSTON, MA, UNITED STATES, June 5, 2025 /EINPresswire.com/ -- [Enkrypt AI](#), a leader in AI safety and compliance, today announced the latest release of its [AI Compliance Management Solution](#), the first solution purpose-built to help enterprises meet the rising demands of global AI regulations through automation and intelligent reasoning.

As enterprises race to deploy generative AI, they face growing pressure to ensure those systems comply with emerging laws, internal policies, and ethical standards. Enkrypt AI's solution addresses this challenge head-on by combining real-time policy enforcement with a proprietary reasoning engine that can interpret, explain, and align AI behavior with regulatory and organizational requirements.

"The future of AI adoption depends on trust—and trust requires explainability," said Sahil Agarwal, CEO and Co-Founder of Enkrypt AI. "Our reasoning engine doesn't just detect noncompliance; it understands why a model's output might violate policy and offers actionable guidance. We built this solution to eliminate the manual burden on risk and compliance teams while enabling faster, safer AI innovation."

Solving the Compliance Bottleneck

Traditional AI governance tools often rely on static checklists and fragmented reviews, making them difficult to scale in fast-paced enterprise environments. Enkrypt AI's Compliance Management Solution goes further by:

1. Automatically detecting and mitigating compliance violations across AI-generated content based on any regulation policy

2. Mapping model behavior to global regulatory frameworks such as the EU AI Act, NIST AI RMF, and industry-specific standards like HIPAA and the ECOA
3. Providing audit-ready reasoning traces that explain decisions in real time
4. Integrating seamlessly with internal policies and risk workflows

The solution continuously monitors AI applications—from third-party LLMs to custom in-house models—flagging issues like fairness violations, safety risks, and misuse of sensitive data. Its unique reasoning engine contextualizes these risks with evidence-based justifications, streamlining cross-functional audits and documentation.

Built for Security, Speed, and Scalability

The Enkrypt AI compliance solution is enterprise-ready with SOC 2 compliance, robust API integrations, multi-model AI support for platforms like OpenAI, Anthropic, Mistral, and internal LLMs. Whether companies are deploying AI chatbots, co-pilots, or agents, the solution ensures every output is compliant by design—not as an afterthought.

The latest release comes at a pivotal time, with global regulations like the EU AI Act introduce steep penalties for noncompliance. Companies in finance, healthcare, retail, and defense are under mounting pressure to demonstrate AI safety and governance at scale.

“We’re helping organizations accelerate AI adoption responsibly, without drowning in compliance overhead,” added Agarwal. “It’s about moving fast—but with control, accountability, and trust built into every layer.”

About Enkrypt AI

Enkrypt AI is an AI safety and compliance platform. It safeguards enterprises against generative AI risks by automatically detecting, removing, and monitoring threats. The unique approach ensures AI applications, systems, and agents are safe, secure, and trustworthy. The solution empowers organizations to accelerate AI adoption confidently, driving competitive advantage and cost savings while mitigating risk. Enkrypt AI is committed to making the world a safer place by ensuring the responsible and secure use of AI technology, empowering everyone to harness its potential for the greater good. Founded by Yale Ph.D. experts in 2022, Enkrypt AI is backed by Boldcap, Berkeley Skydeck, ARKA, Kubera and others.
