

# Erectile Dysfunction Market Epidemiology Report 2025-2035: Pipeline Analysis, Treatment, Trends, Rising Incidence & Prevalence

*The report provides a detailed analysis of the current erectile dysfunction marketed drugs and late-stage pipeline drugs.*

BROOKLYN, NY, UNITED STATES, June 9, 2025 /EINPresswire.com/ -- The erectile dysfunction market reached a value of USD 2.0 billion across the top 7 markets (US, EU4, UK, and Japan) in 2024. Looking forward, IMARC Group expects the top 7 major markets to reach USD 4.5 billion by 2035, exhibiting a growth rate (CAGR) of 7.04% during 2025-2035.

The erectile dysfunction (ED) market is constantly growing dynamically as awareness increases, treatment

options diversify, and lifestyle-related conditions carve a growing share in the market. ED can occur even in younger men, but as a man grows older, the chances of this condition increase. A growing incidence of diabetes, obesity, and cardiovascular ailments has increased the population of the at-risk category, resulting in rising demand for trustworthy and other alternatives.

A factor contributing to increased growth is societal acceptance through open communications about sexual health. In the past few years, one would put their hands on an ayurvedic medicine that had proved to be the best remedy for impotence, and cases of impotence were not even shared publicly. In contrast, in the last few years, culture has seen a change. With health promotion campaigns and physicians, looking into sexual wellness has become routine during clinical discussions, and the probing about sexual health by clinicians has grown. This, in turn, has acted as an impetus encouraging more men to seek assistance from health professionals and thereby increased need for diagnosis and treatment.

Erectile Dysfunction Market Size

At the very center of the ED market are pharmaceutical advancements. Oral treatments have generally been the dominant treatment choice ever since the approval of sildenafil, tadalafil, and vardenafil. These drugs are also known as phosphodiesterase type 5 inhibitors (PDE5is), while they remain hugely favored for being easy to use, effective, and safe. Therefore, by 2025, PDE5 inhibitors are well established as the first-line therapy and often reimbursed by health kits, further boosting sales- notably for men with cardiovascular diseases.

In addition to conventional medicines, the market is growing with newer delivery systems and novel therapies. Transdermal gels, orally disintegrating tablets, and sustained-release formulations are being launched to present flexible, unobtrusive, and easy-to-use options. Developments in regenerative medicine, including stem cell therapy and platelet-rich plasma (PRP) injections, are promising, with the potential to deliver longer-term or curative effects. Although in early development, such innovations maintain increasing interest among both clinicians and patients looking for more natural or extended outcomes.

Lifestyle aspects and concurrent medical conditions significantly impact the ED market. Hypertension, metabolic syndrome, and obesity, besides heightening the risk of ED, also determine treatment. Physicians now focus on overall well-being, recommending weight control, dietary modification, and physical exercise as integral aspects of care. These decisions hasten effective cure and minimize reliance on medication, establishing a full-care strategy that incorporates medical and lifestyle interventions.

The aging male population fuels market growth in two manners. First, men over the age of 50 have a higher incidence of ED, expanding the patient base. Second, with improved life expectancy, older men maintain active sexual lives and look for interventions that preserve quality of life. This demographic phenomenon has focused interest in supportive therapies, which are designed to meet mature users' needs and usually packaged as part of wider wellness schemes.

The report also provides a detailed analysis of the current erectile dysfunction marketed drugs and late-stage pipeline drugs.

## Market Insights

How has the erectile dysfunction market performed so far and how will it perform in the coming years?

What are the markets shares of various therapeutic segments in 2024 and how are they expected to perform till 2035?

What was the country-wise size of the erectile dysfunction market across the seven major markets in 2024 and what will it look like in 2035?

What is the growth rate of the erectile dysfunction market across the seven major markets and what will be the expected growth over the next ten years?

What are the key unmet needs in the market?

## Competitive Landscape With Key Players:

The competitive landscape of the erectile dysfunction market has been studied in the report with the detailed profiles of the key players operating in the market.

VIVUS

Pfizer

Eli Lilly and Company

Initiator Pharma

## Countries Covered

United States

Germany

France

United Kingdom

Italy

Spain

Japan
