What Is The Anticipated Growth Of The Cardiotonic Agents  
Market?

Projections suggest the market [size of cardiotonic agents](#)

will see further climbs in the coming years, increasing to \$5.06 billion in 2029, with a CAGR of 12.6%. Causes for this predicted expansion in the forecast period are likely to be tied to rising cardiovascular mortality rates, an escalation in clinical trials focusing on enhanced cardiotonic formulations, increasing public-private partnerships in cardiovascular drug development, and a growing demand for personalized cardiovascular medicine.

The cardiostimulant agents market report also highlights crucial trends expected to make significant contributions during the forecast period. These advancements include the development of peptide-based cardiostimulant agents, dual-mechanism drug development, the incorporation of pharmacogenomics, the innovation of injectable depot formulations, and combination therapies.

What Is Driving The [Growth In The Cardiostimulant Agents Market](#)?

The cardiostimulant agents market performance is significantly influenced by the increasing prevalence of cardiovascular diseases. Cardiovascular diseases CVDs, including conditions such as coronary artery disease, heart failure, arrhythmias, and stroke, affect the heart and blood vessels. The growth in these diseases can be largely attributed to diets high in saturated fats, trans fats, salt, and added sugars, leading to obesity, high blood pressure, and elevated cholesterol levels. To combat these health issues, cardiostimulant agents are administered to improve heart efficiency and contraction strength, aiding blood circulation and reducing symptoms related to various cardiovascular diseases.

For instance, reports from the Australian Institute of Health and Welfare revealed that doctor-certified deaths due to coronary heart disease CHD in Australia increased from 14,100 in 2021 to 14,900 in 2022. Therefore, the escalating prevalence of cardiovascular
